**A Tribute To ANTONETTE** Lee Olofson,2005-11 AN ABANDONED ROAD There is a path now where once there was a road Where smooth brown earth and jaded rocks Fell away in deep depression The trail of wheels and neighing horses and of lighter walks It grows thick and tall the grass that was once held at bay Dared not to rise where tramping feet would crush But staged on edge where cruel ungainly winds Vent their wrath unceasingly with rain and dust It has conquered now for slowly the grinding ceased And the lighter steps dwindled with the laughter it had known It dared to rise between the ruts and bend To hide the scars from some stray steps that roam And intrude upon their sanctuary where conquered winds Hold not the lash of yore but with gentleness obey The lull moods of quiet rains the brushed air That shrouds the stillness of an abandoned road *Long-Term Forest Dynamics of the Temperate Zone* Paul A. Delcourt,Hazel R. Delcourt,2012-12-06 The synthesis presented in this volume is a direct outgrowth of our ten year FORMAP Project Forest Mapping Across Eastern North America from 20 000 yr B P to the Present Many previous research efforts in paleoecology have used plant fossil evidence as proxy information for primarily geologic or climatic reconstructions or as a bio stratigraphic basis for correlation of regional events In contrast in this book we deal with ecological questions that require a holistic perspective that integrates the interactions of biota with their dynamically changing environments over time scales up to tens of thousands of years In

the FORMAP Project our major research objective has been to use late Quaternary plant ecological data sets to evaluate long term patterns and processes in forest development In order to accomplish this objective we have prepared subcontinent scale calibrations that quantitatively relate the production and dispersal of arboreal pollen to dominance in the vegetation for the major tree types of eastern North America Quantification of pollen vegetation relationships provides a basis for developing quantitative plant ecological data sets that allow further ecological analysis of both individual taxa and forest communities through time Application of these calibrations to fossil pollen records for interpreting forest history thus represents a fundamental step beyond traditional summaries based upon pollen percentages
