The Next Hundred Years . . . Then and Now Robert H. Cartmill, 2002 Time present and time past are both perhaps present in time future and time future contained in time past T S Eliot Everybody is interested in the future Based on present estimates of the world population and predictions of human life expectancy most people now alive will spend more than half their lives in the 21st century Starting today everybody has a future But what will that future be Of course nobody really knows so people have to guess There is no shortage of people who are volunteering guesses now at the beginning of the new century Newspaper editors and columnists TV reporters financial pundits government agencies and many others are filling the media with their forecasts for the next hundred years The question is How good are these predictions This in turn leads to more questions Are there any criteria to distinguish a good likely to come true prediction from a bad not likely to come true prediction Are forecasts of future events in the field of the sciences more likely true than forecasts say in politics economics or social relationships The author firmly believes that the best way to answer these questions is to take advantage of the past At the beginning of the 20th century experts made the same kinds of forecasts for the next hundred years then These forecasts have been collected grouped into six categories and consistently graded by comparing the predictions against the history of the 20th century After this grading the author analyzed the forecasts to discover which methods worked best and those that failed Beyond just determining right wrong or in between I checked for things that happened but were not predicted This is critical for estimating the limitations of today s predictions Did anybody predict that a man would walk on the moon or that countless communications satellites would be in orbit Did anyone forecast the rise and fall of Communism in Russia By seeing where our forebears went seriously wrong or were uncannily accurate we should more ably judge the current forecasts for the next century or at least not fall into grave error Then by combining this analysis with the best evaluation techniques of today s futurists the author examines and evaluates current forecasts for the next hundred years now Strangely enough this simple logical and straightforward method of evaluating the present predictions has never been done before Also included is a tantalizing quiz that asks readers to predict some possible events of the 21st century

Summary of George Friedman 's The Next 100 Years Everest Media, 2022-04-09T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The American people have a deep seated belief that the United States is approaching its end This is reflected in the letters pages of newspapers the web and public discourse The American economy is so large that it is larger than the economies of the next four countries combined 2 The United States is still underpopulated by global standards It has plenty of room to increase all three of its components land labor and capital The American economy is so powerful because of its military power 3 The United States is only at the beginning of its power The twenty first century will be the American century and it has been forced to take on the role that European power occupied for five hundred years between Columbus s voyage in 1492 and the fall of the Soviet Union in 1991 4 Until the fifteenth century humans lived in self enclosed sequestered worlds But as the European empires expanded they brought the world together as a single entity Europe became the center of gravity of the global system
