Wheelwright, 1862 *Observations of a Naturalist in the Pacific Between 1896 and 1899: Vanua Levu, Fiji, and Plant-Dispersal (Complete)* Henry Brougham Guppy, 2020-09-28 The remarkable shape of this island at once attracts the attention and indeed it is in its irregular outline and in the occurrence over a large portion of its surface of submarine tuffs and agglomerates that will be found a key to the study of its history With an extreme length of 98 miles an average breadth of 15 to 20 miles and a maximum elevation of nearly 3 500 feet it has an area estimated at 2 400 square miles comparable with that of the county of Devon Whilst its peculiarly long and narrow dimensions are to be associated with the narrowing of the submarine basaltic platform from which it rises together with the other large island of Viti Levu its extremely irregular shape

is closely connected with the composite mode of its origin We have here exemplified the process of the building up of a continental island in the great area of emergence of the Western Pacific that region which displays at various heights above the sea the ancient reefs and the underlying deposits of the Solomon Islands New Hebrides Fiji Tonga yet it is in its incomplete condition that Vanua Levu possesses its importance for the investigation of this subject This island has in fact been formed by the union of a number of smaller volcanic islands during a long protracted period of emergence These original islands are indicated approximately by the 1 800 feet contour level in the accompanying map There is however no reason for supposing that the movement of emergence has altogether ceased In the course of ages the extensive submarine plateau from which it rises will be laid bare and the small surrounding islands that are situated upon it such as Yanganga Kia Mali Rambli Kioa c will be included in the area of Vanua Levu
