A History of Personality Psychology Frank Dumont, 2010-02-18 In this book Frank Dumont presents personality psychology with a fresh description of its current status as well as its prospects Play sex cuisine creativity

altruism, pets, grieving rituals and other oft neglected topics broaden the scope of this fascinating study. This tract is imbued with historical perspectives that reveal the continuity in the evolving science and research of this discipline over the past century. The author places classic schemas and constructs as well as current principles in the context of their socio-political catalysts. He further relates this study of the person to life span developmental issues and to cultural gender specific trait based genetic, epigenetic and evolutionary research findings. Personality psychology has recently reconciled itself to more modest paradigms for describing, explaining and predicting human behaviour than it generated in the 19th and 20th centuries. This book documents that transformation providing valuable information for health service professionals as well as to teachers, researchers and scientists.

Client-centered and Experiential Psychotherapy in the Nineties Richard Balen, 1990 This voluminous book of 47 chapters offers a good cross section of what is burgeoning in the field of client centered and experiential psychotherapy on the threshold of the nineties it does not represent a single vision but gives the floor to the various suborientations classics Rogerians client centered therapists who favor some form of integration or even eclecticism experiential psychotherapists for whom Gendlin's focusing approach is a precious way of working client centered therapists who look at the therapy process in terms of information processing existentially oriented therapists Remarkable is that for the first time in the history of client centered experiential psychotherapy the European voice rings through forcefully more than half of the contributions were written by authors from Western Europe Several chapters contain reflections on the evolution past present and future of client centered experiential psychotherapy The intensive research into the process which

had a central place in the initial phase of client centered therapy is given here ample attention with several creative studies and proposals for renewal In numerous contributions efforts are made to build and further develop a theory of psychopathology the client's process the basic attitudes and task oriented interventions of the therapist The chapters dealing with clinical practice typically aim at the description of therapy with specific client populations and particularly severely disturbed clients And finally a few fields are introduced which are new or barely explored within the client centered experiential approach working with dreams health psychology couple and family therapy
