Love, Sharon M. Derrick, Jason M. Wiersema, 2011-08-18 This illustrated guide to the role of the forensic

anthropologist in investigating child abuse is an essential resource in one of the most contentious areas of forensic pathology. Not only does it supply a review of the literature in this field but it illustrates the material with photographs from real cases investigated by the Harris County Institute of Forensic Sciences which serves a population of four million people. Broken down into body regions and skeletal elements for ease of reference, the atlas facilitates the vital work performed by forensic anthropologists who bring to the autopsy table a store of specialist knowledge that can turn a case. Despite the frequency of child fatalities in America (2.3 per 100 000 attributed to physical abuse), merely recognizing the offense is a major forensic challenge. The tell tale signatures of non accidental injury can be very subtle, making it difficult to differentiate between accidental and non accidental injury. Yet successful adjudication of a child abuse case often rests on the correct interpretation of skeletal injury. In this volume, the authors guide the reader through published data regarding the mechanics and interpretation of injuries, including the agencies they indicate. The material includes discussion of the limitations faced in interpreting some injuries where making a judgment on cause is tricky. In addition, a chapter on natural diseases affecting the bones provides a good overview of several conditions that are often invoked as mimics of child abuse. Finally, this publication evinces the value of collaboration between the pathologist and the anthropologist.

The Juvenile Skeleton in Forensic Abuse Investigations Ann H. Ross, Suzanne M. Abel, 2011-07-26

Juvenile homicide and fatal maltreatment remain serious and pervasive problems in the developed world and especially in the United States where in 2005 some 1 500 children died from neglect and physical abuse. Alarming statistics such as this, as well as an upsurge in the media attention paid to all things forensic, underscore the pressing need for the utmost rigor in the scientific investigation of child abuse cases. This well timed volume is a response to the climate of public and press interest in such inquiries where the forensic aspects of the casework generate an enormous amount of attention. The contributions cover a wide range of topics and explore many of the finer details of investigations into juvenile fatalities suspected of being abuse related. The chapters reflect both the multi disciplinary nature of such investigations and also the need for law enforcement professionals to take a rounded holistic approach to the casework involved. The motivational factors that lead many professionals enter this arena of investigation are of course personal and individual. However, at the core of their commitment and their work is a shared need for justice, plain and simple. Victim advocacy and protecting the rights of children both living and deceased remains a key impetus for those professionals who specialize in child abuse research. At the heart of this book is the aim of providing both a vital resource for investigators and a purposeful voice for the young victims of abuse, unable as they are to stand up and speak for themselves.
