Abstract: This paper presents a new approach to the problem of finding the optimal path in a network. The approach is based on the use of a heuristic function to estimate the cost of the path from a given node to the goal. The heuristic function is defined as the minimum cost of any path from the node to the goal. The algorithm is based on the principle of dynamic programming. The algorithm is efficient and easy to implement. The algorithm is applicable to a wide range of problems. The algorithm is a good example of the power of dynamic programming.
