The Norfolk Broads And Fens:

Norfolk Broads and Fens Derek Bowskill,1999 The Status of Fen and the Origin of the Norfolk Broads Marietta Pallis,1961 **The Story of the Fens** Frank Meeres,2019-03-29 Lincolnshire Cambridgeshire Norfolk and Suffolk as well as Peterborough City Council all lay claim to a part of the Fens Since Roman times man has increased the land mass in this area by one third of the size It is the largest plain in the British Isles covering an area of nearly three quarters of a million acres and is unique to the UK The fen people know the area as marsh land reclaimed from the sea and fen land drained from flooding rivers running from the uplands The Fens are unique in having more miles of navigable waterways than anywhere else in the UK Mammoth drainage schemes in the seventeenth and eighteenth changed the landscape forever leading slowly but surely to the area so loved today Insightful entertaining and full of rich incident here is the fascinating story of the Fens

The Lost Fens Ian D. Rotherham,2013-04-01 The loss of the great fenlands of eastern England is the greatest single removal of ecology in our history So thorough was the process that most visitors to the regions or even people living there have little idea of what has gone For many the Fenlands are the vast expansive flatlands of intensive farming the breadbaskets of Britain Lost are the vast flocks of wetland birds that filled the evening skies in winter the frozen wetlands and the fen skaters of the winter and the abundant black terns or breeding wading birds of the summer months However pause a while off main roads and consider place names and road names Fenny Lane The Withies Commonside Reed Holme Fen Common Turbary Lane Wildmore Adventurers Fen Wicken Fen and more they tell a story of a landscape now gone but once hugely important The Fens bred revolution and civil war and paid the penalty They nurtured religious non conformism with global impact After 1066 the Saxons withheld the Normans onslaught and in the 1970s Beavers took action against twentieth century invaders The fenscapes neither water nor land but something in between breed independence and if necessary dissent This story is of politically and economically driven ecological catastrophe and loss So much has gone but we do not even know fully what was there before With global environmental change and especially climate change fenlands once again have major roles in our sustainable futures *Vegetation and Hydrology of Floating Rich-fens* Geert van Wirdum,1991 **British Plant Communities: Volume 4, Aquatic Communities, Swamps and Tall-Herb Fens** J. S. Rodwell,1991 An account of the vegetation types of Great Britain **The Natural History of Wicken Fen** John Stanley Gardiner,Sir Arthur George Tansley,1923 *Fen and Sea* I.G. Simmons,2021-12-22 Renowned environmental historian I G Simmons synthesizes detailed research into the landscape history of the coastal area of Lincolnshire between Boston and Skegness and its hinterland of Tofts Low Grounds and Fen as far as the Wolds With many excellent illustrations Simmons chronicles the ways in which this low coast backed by a wet fen has been managed to display a set of landscapes which have significant differences that contradict the common terminology of uniformity calling the area flat or referring to everywhere from Cleethorpes to King s Lynn as the fens These usually labeled flat areas of East Lincolnshire between Mablethorpe and

Boston are in fact a mosaic of subtly different landscapes They have become that way largely due to the human influences derived from agriculture and industry Between the beginning of Norman rule and the advent of pumped drainage a number of significant changes took place The author has accumulated information from Roman times until the beginnings of fossil fuel powered drainage bringing together both scientific data and documentary evidence including medieval and early modern documents from the National Archive Lincolnshire Archives Bethlem Hospital and Magdalen College Oxford to explore the little known archives of regional interest

Power from Wind Richard Leslie Hills,1996-09-12 The wind is a fickle source of power Windspeeds are frequently too low to be of any practical use so that windpower has generally remained a marginal resource Since the inception of windpower around 1000 AD technology has been deployed to obtain the most economical power from wind The author traces its technical evolution concentrating on the growth in understanding of wind and charting crucial developments in windmill design The history of the windmill is focused on North Western Europe drawing on the origins of the first horizontal windmills in Persia Tibet and China Industrial applications such as in textiles papermaking and mining are examined Gradually windmills were improved but were finally eclipsed by steam engines in the nineteenth century due to increased levels of industrialisation The book concludes with a look at the recent re emergence of windpower as a viable source of power in the wake of the energy crisis

Muntjac and Water Deer Arnold Cooke,2019-04-22 Muntjac and water deer were introduced to Britain from East Asia This book provides a comprehensive overview of their natural history and the management of their environmental impacts In lowland England muntjac deer are one of the drivers of changes in woodland structure and species composition and many of the principles relating to such woodland impact are also applicable to the activities of other species of deer Interest in environmental impacts of deer is not solely restricted to woodlands The highest densities of water deer occur in wetlands where there is potential for conflict and considerable numbers are also found on agricultural land Muntjac have also settled in suburbia and frequently cause impacts there Conservationists and national decision makers are concerned both about invasive alien species and about increasing deer populations The first section covers the natural history of both species including breeding biology deer in the field colonisation of Britain a detailed look at colonisation in a single county methods for studying deer populations and a review of deer population numbers The second section covers environmental impact risk assessment impact management control of muntjac effect of muntjac browsing and grazing habitat recovery from muntjac impacts and a study on the impacts of water deer The section concludes with an overview of management and monitoring The costs and benefits of both species are discussed and questions asked about whether we are getting on top of problems caused by muntjac locally and nationally and will water deer turn out to be similar to muntjac Attitudes and approaches to these species are changing with water deer we are actively studying whether it might be an environmental problem not waiting until after it has obviously become one What will happen to distribution numbers impacts and attitudes in the future Will water deer ever become a suburban animal What does the future hold for water deer in China and Korea and how important is the English population as a global conservation resource
