The Art of Astrophotography Ian Morison, 2017-02-02 This book provides a step by step guide of how anyone can capture and produce beautiful astronomical images for beginners and professionals alike

Observational Constraints on the Influence of Active Galactic Nuclei on the Evolution of Galaxies Christopher Mark Harrison, 2016-01-20 This prize winning Ph D thesis by Chris Harrison adopts a multi faceted approach to address the lack of decisive observational evidence utilising large observational data sets from several world leading telescopes Developing several novel observational techniques Harrison demonstrated that energetic winds driven by Active Galactic Nuclei AGN are found in a large number of galaxies with properties in agreement with model predictions One of the key unsolved problems in astrophysics is understanding the influence of AGN the sites of growing supermassive black holes on the evolution of galaxies Leading theoretical models predict that AGN drive energetic winds into galaxies regulating the formation of stars However until now we have lacked the decisive observational evidence to confirm or refute these key predictions Careful selection of targets allowed Harrison to reliably place these detailed observations into the context of the overall galaxy population However in disagreement with the model predictions Harrison showed that AGN have little global effect on star formation in galaxies Theoretical models are now left with the challenge of explaining these results

Handbook of CCD Astronomy Steve B. Howell, 2000-04-24 Charge Coupled Devices CCDs are the state of the art detector in many areas of observational science Astronomy physics chemistry medical imaging and remote sensing are just a few of the fields of study in which they play a crucial role This handbook provides a concise and accessible reference on all practical aspects of using CCDs Starting with the electronic workings of CCDs this handbook discusses their basic characteristics and then gives methods and examples of how to determine these values While the focus of the book is on the use of CCDs in professional observational astronomy advanced amateur astronomers and researchers in physics chemistry medical imaging and remote sensing will also find it very valuable Tables of useful and hard to find data and key practical equations round off the book and ensure that it provides an ideal introduction to the practical use of CCDs for graduate students and a handy reference for more experienced users

Fluid Frames Corrie Parks, 2020-03-27 Once the realm of a few stalwart artists animating with sand clay and wet paint is now accessible for all filmmakers with an experimental frame of mind Created directly under the camera with frame by frame stopmotion this fluid frame animation provides a completely unique visual world for animators While pioneering animators such as Caroline Leaf Alexander Petrov and Ishu Patel paved the way the availability of frame capture programs compositing software and digital workflow is opening up new avenues of exploration for artists of all experience levels This book will walk you through setting up your studio choosing and working with your materials and combining the physical under the camera production with digital compositing and effects to enhance your animation Firsthand advice from experimental animation veterans and rising stars in the field Covers the digital aspects of experimental

animation including the latest techniques in After Effects CC Tutorials and source files for under the camera approaches and After Effects enhancements on the book's companion website In addition to the practical advice you'll find historical and contemporary examples of successful films step by step tutorials for working under the camera and working with the footage digitally and interviews and tips from artists who are currently pushing the boundaries in these experimental mediums Stacked with information and images from over 30 artists this book is an indispensable resource for both the student and professional wishing to get their hands dirty in an increasingly digital world **Astronomical Discoveries You Can Make, Too!**

Robert K. Buchheim, 2015-05-12 You too can follow in the steps of the great astronomers such as Hipparchus Galileo Kepler and Hubble who all contributed so much to our modern understanding of the cosmos This book gives the student or amateur astronomer the following tools to replicate some of these seminal observations from their own homes With your own eyes Use your own observations and measurements to discover and confirm the phenomena of the seasons the analemma and the equation of time the logic behind celestial coordinates and even the precession of the equinoxes With a consumer grade digital camera Record the changing brightness of an eclipsing binary star and show that a pulsating star changes color as it brightens and dims Add an inexpensive diffraction grating to your camera and see the variety of spectral features in the stars and demonstrate that the Sun's spectrum is similar to one particular type of stellar spectrum With a backyard telescope Add a CCD imager and you can measure the scale of the Solar System and the distance to a nearby star You could even measure the distance to another galaxy and observe the cosmological redshift of the expanding universe **Astronomical Discoveries You Can Make Too** doesn't just tell you about the development of astronomy it shows you how to discover for yourself the essential features of the universe *Official Gazette of the United States Patent and Trademark Office*, 1993 **Essential**

Astronomy in the Near-Infrared - Observing Strategies and Data Reduction Techniques Jochen Heidt, 2022-07-04 Near infrared astronomy has become one of the most rapidly developing branches in modern astrophysics Innovative observing techniques near infrared detectors with quantum efficiencies in excess of 90% highly specialised instruments as well as advanced data reduction techniques have allowed major breakthroughs in various areas like exoplanets star forming regions the supermassive black hole in the Galactic center and the high redshift Universe In this book the reader will be introduced to the basic concepts of how to prepare near infrared observations with maximized scientific return Equal weight is given to all aspects of the data reduction for both imaging and spectroscopy Information is also provided on the state of the art instrumentation available and planned on detector technology or the physics of the atmosphere all of which influence the preparation and execution of observations and data reduction techniques The beginner but also the expert will find a lot of information in compact form which is otherwise widely dispersed across the internet or other sources **Analysing**

Architecture Simon Unwin, 2020-12-29 Now in its fifth edition *Analysing Architecture* has become internationally established as the best introduction to architecture. Aimed primarily at those studying architecture, it offers a clear and accessible insight into the workings of this rich and fascinating subject. With copious illustrations from his own notebooks, the author dissects examples from around the world and all periods of history to explain the underlying strategies in architectural design and show how drawing may be used as a medium for analysis. In this new edition *Analysing Architecture* has been revised and expanded. Notably the chapter on How Analysis Can Help Design has been redeveloped to clearly explain this crucially important aspect of study to a beginner readership. Four new chapters have been added to the section dealing with Themes in Spatial Organisation on Axis Grid Datum Place and Hidden Material from the Case Studies in previous editions has been redistributed amongst earlier chapters. The Introduction has been completely rewritten and the format of the whole book has been adjusted to allow for the inclusion of more and better illustrative examples. Works of architecture are instruments for managing orchestrating modifying our relationship with the world around us. They frame just about everything we do. Architecture is complex subtle frustrating but ultimately extremely rewarding. It can be a difficult discipline to get to grips with; nothing in school quite prepares anyone for the particular demands of an architecture course. But this book will help. www.instagram.com/analysingarchitecture

Maya Iconography Elizabeth P. Benson, Gillett G. Griffin, 2024-01-09 A landmark work on the iconography of one of the world's great civilizations. This book presents foundational work on Maya iconography from leading practitioners in fields ranging from archaeology, anthropology, and art history to linguistics, astronomy, photography, and medicine. The period discussed runs from the last centuries B.C. through the great Maya Classic period, with some discussion of later eras and of regions outside the Maya area. Featuring an incisive introduction by Elizabeth Benson and Gillett Griffin, *Maya Iconography* demonstrates how Maya beliefs developed over time and makes important connections between Preclassic and Classic iconography. The contributors are John Carlson, Michael Coe, David Freidel, Donald Hales, Norman Hammond, Nicholas Hellmuth, John Justeson, Barbara Kerr, Justin Kerr, Mary Ellen Miller, William Norman Lee, Parsons Francis Robicsek, Linda Schele, David Stuart, and Karl Taube. Physics of Star Formation in Galaxies F. Palla, H. Zinnecker, 2006-07-06 The book begins with a historical introduction *Star Formation: The Early History* that presents new material of interest for students and historians of science. This is followed by two long articles on Pre-Main Sequence Evolution of Stars and Young Clusters and Observations of Young Stellar Objects. These articles on the fascinating problem of star formation from interstellar matter give a thorough overview of present-day theories and observations. The articles contain material so far unpublished in the astronomical literature. The book addresses graduate students and can be used as a textbook for advanced courses in stellar astrophysics.

Astronomy with a Home Computer Neale Monks,2005-03-03 Here is a one volume guide to just about everything computer related for amateur astronomers Today s amateur astronomy is inextricably linked to personal computers Computer controlled go to telescopes are inexpensive CCD and webcam imaging make intensive use of the technology for capturing and processing images Planetarium software provides information and an easy interface for telescopes The Internet offers links to other astronomers information and software The list goes on and on Find out here how to choose the best planetarium program are commercial versions really better than freeware Learn how to optimise a go to telescope or connect it to a lap top Discover how to choose the best webcam and use it with your telescope Create a mosaic of the Moon or high resolution images of the planets Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer whether it is running Microsoft Windows Mac O S or Linux It doesn t matter what kind of telescope you own either a small refractor is just as useful as a big go to SCT for most of the projects in this book

On Not Looking Frances Guerin,2015-01-09 On Not Looking The Paradox

of Contemporary Visual Culture focuses on the image and our relationship to it as a site of not looking. The collection demonstrates that even though we live in an image saturated culture many images do not look at what they claim. Viewers often do not look at the images and in other cases we are encouraged by the context of exhibition not to look at images. Contributors discuss an array of images: photographs, films, videos, press images, digital images, paintings, sculptures, and drawings from everyday life, museums and galleries, and institutional contexts such as the press and political arena. The themes discussed include politics of institutional exhibition and perception of images, censored, repressed, and banned images, transformations to practices of not looking as a result of new media interventions, images in history and memory, not looking at images of bodies and cultures on the margins, responses to images of trauma and embodied vision.

Brown Dwarf Companions to Young Solar analogs Stanimir Metchev, 2006-02. We present results from an adaptive optics survey conducted with the Palomar and Keck telescopes over 3 years which measured the frequency of stellar and sub-stellar companions to Sun-like stars. The survey sample contains 266 stars in the 3-10000 million year age range at heliocentric distances between 8 and 200 parsecs and with spectral types between F5-K5. A sub-sample of 101 stars between 3-500 million years old were observed in deep exposures with a coronagraph to search for faint sub-stellar companions. A total of 288 candidate companions were discovered around the sample stars which were re-imaged at subsequent epochs to determine physical association with the candidate host stars by checking for common proper motion. Benefitting from a highly accurate astrometric calibration of the observations we were able to successfully apply the common proper motion test in the majority of the cases including stars with proper motions as small as 20 milli-arcseconds/year. The results from the survey include the discovery of three new brown dwarf companions: HD 49197B, HD 203030B, and ScoPMS 214B. 43 new stellar binaries and a triple system. The physical association of an additional a priori suspected candidate sub-stellar companion to the star HII 1348 is astrometrically confirmed. The newly discovered and confirmed young brown dwarf companions span a range of spectral types between M5 and T0.5 and will be of prime significance for constraining evolutionary models of young brown dwarfs and extra-solar planets. Based on the 3 new detections of sub-stellar companions in the 101 star sub-sample and following a careful estimate of the survey incompleteness, a Bayesian statistical analysis shows that the frequency of 0.012-0.072 solar mass brown dwarfs in 30-1600 AU orbits around young solar analogs is 6.8%-4.9%-8.3% (2-sigma limits). While this is a factor of 3 lower than the frequency of stellar companions to G-dwarfs in the same orbital range, it is significantly higher than the frequency of brown dwarfs in 0.3 AU orbits discovered through precision radial velocity surveys. It is also fully consistent with the observed frequency of 0.3 AU extra-solar planets. Thus, the result demonstrates that the radial velocity brown dwarf desert does not extend to wide separations, contrary to previous belief.

The Formation of Galactic Bulges C. Marcella Carollo, Henry C. Ferguson, Rosemary F. G. Wyse, 1999. Bulges lie at the center of spiral galaxies. Until recently they were thought to host uniquely old stellar populations and thus provide a key for understanding galaxy formation. Recent

observations from the ground and space have drastically changed our view on the nature of bulges and shown that they can also contain dust gas and star forming regions This timely volume presents review articles by a panel of international experts who gathered at a conference at the Space Telescope Science Institute Baltimore to address several fundamental questions What is a bulge When and how did bulges form And on what timescales This volume provides a state of the art picture of our new understanding of these fundamental building blocks of galaxies and a stimulating reference point for all those interested in galaxy formation
