Windt,2023-12-05 A comprehensive proposal for a conceptual framework for describing conscious experience in dreams integrating philosophy of mind sleep and dream research and interdisciplinary consciousness studies Dreams conceived as conscious experience or phenomenal states during sleep offer an important contrast condition for theories of consciousness and the self Yet although there is a wealth of empirical research on sleep and dreaming its potential contribution to consciousness research and philosophy of mind is largely overlooked This might be due in part to a lack of conceptual clarity and an underlying disagreement about the nature of the phenomenon of dreaming itself In Dreaming Jennifer Windt lays the

groundwork for solving this problem She develops a conceptual framework describing not only what it means to say that dreams are conscious experiences but also how to locate dreams relative to such concepts as perception hallucination and imagination as well as thinking knowledge belief deception and self consciousness Arguing that a conceptual framework must be not only conceptually sound but also phenomenologically plausible and carefully informed by neuroscientific research Windt integrates her review of philosophical work on dreaming both historical and contemporary with a survey of the most important empirical findings This allows her to work toward a systematic and comprehensive new theoretical understanding of dreaming informed by a critical reading of contemporary research findings Windt s account demonstrates that a philosophical analysis of the concept of dreaming can provide an important enrichment and extension to the conceptual repertoire of discussions of consciousness and the self and raises new questions for future research

Current Research on Sleep and Dreams United States. Public Health Service, Gay Gaer Luce, 1966 This monograph was stimulated by the extraordinary growth now apparent in an area generally identified as sleep and dream research for this recent concentration of scientific effort offers a singular example of the power that basic research can exert in penetrating the problems of mental health and illness In the past year alone the National Institute of Mental Health supported over 60 projects related in whole or in part to studies of sleep and dreams with awards totaling over 2 million The work of many of these NIMH investigators is included in this summary which extends beyond the Institute s program insofar as necessary to indicate the major trends of work in the area The report cannot of course encompass the classical studies already summarized in published literature nor even provide comprehensive survey of present day sleep research for although much of the scientific data on sleep have been generated during the last dozen years significant references in this field now number in the many thousands The mosaic of disciplines contributing to the study of sleep contains such diverse fields as psychiatry and mathematics psychology and biochemistry physiology and anthropology Nevertheless ferment about the subject matter and a spirit of cooperation across traditional disciplinary lines have made it possible to knit together data that might otherwise have lain unrelated in a variety of laboratories During the past year individual summaries of many of the projects cited here were distributed to scientists working in the field of sleep and dreams Many of the recipients felt that up to date reports especially in a field of such dynamic activity represented a unique solution to the problem of scientific information exchange Such communication it was felt provided a quick look at work in progress that might prevent duplication of effort and stimulate pertinent contacts among scientists thus aiding them in their work It is hoped that this monograph will be a further part of that process

Adult Behavior Therapy Casebook Michel Hersen, Cynthia G. Last, 2013-11-11 Several year ago we edited a casebook on behavior therapy with children The book appeared to fill a gap in the existing child literature and was quite well received A similar gap

appears to exist in the behavioral literature for adult cases in that there are very few adult case books currently available The present book was developed in order to devote an entire casebook to both standard and more innovative clinical applications of behavioral treatments to adult problems The book containing 19 chapters is divided into two parts In the first part in a chapter entitled Clinical Considerations we discuss a variety of clinical issues that are of importance to designing and executing behaviorally based interventions with adults The bulk of the book the remaining 18 chapters contains a variety of cases presented by our experts Each of the treatment cases is presented using the same format in order to increase consistency and comparability across chapters Specific sections for each chapter are as follows 1 Description of the Disorder 2 Case Identification 3 Presenting Complaints 4 History 5 Assessment 6 Selection of Treatment 7 Course of Treatment 8 Termination 9 Follow up and 10 Overall Evaluation Thanks are extended to our many expert contributors without whom this book would not be possible We also wish to acknowledge the technical support of Mrs Kim Sterner Finally we thank our editor at Plenum Eliot Werner for his support and forbearance in the face of the inevitable delays
