Atomic Physics with Heavy Ions Heinrich F. Beyer,Viatcheslav P. Shevelko,2012-12-06 This book is devoted to one of the most active domains of atomic physic atomic physics of heavy positive ions During the last 30 years this terrain has attracted enormous attention

from both experimentalists and theoreticians. On the one hand this interest is stimulated by rapid progress in the development of laboratory ion sources, storage rings, ion traps and methods for ion cooling. In many laboratories a considerable number of complex and accurate experiments have been initiated, challenging new frontiers. Highly charged ions are used for investigations related to fundamental research and to more applied fields such as controlled nuclear fusion driven by heavy ions and its diagnostics, ion surface interaction physics of hollow atoms, x-ray lasers, x-ray spectroscopy, spectrometry of ions in storage rings and ion traps, biology and medical therapy. On the other hand the new technologies have stimulated elaborate theoretical investigations especially in developing QED theory, relativistic many body techniques, plasma kinetic modeling based on the Coulomb interactions of highly charged ions with photons and various atomic particles, electrons, atoms, molecules and ions. The idea of assembling this book matured while the editors were writing another book *X-Ray Radiation of Highly Charged Ions* by H. F. Beyer, H. J. Kluge and V. P. Shevelko, Springer, Berlin Heidelberg, 1997, covering a broad range of x-ray and other radiative phenomena central to atomic physics with heavy ions.
