Genius Denied Jan Davidson, Bob Davidson, Laura Vanderkam, 2007-11-01 With all the talk of failing schools these days we forget that schools can fail their brightest students too We pledge to leave no child behind but in American schools today thousands of gifted and talented students fall short of their potential In Genius Denied Jan and Bob Davidson describe the quiet crisis in education gifted students spending their days in classrooms learning little beyond how to cope with boredom as they relearn material they've already mastered years before This lack of challenge leads to frustration underachievement and even failure Some gifted students become severely depressed At a time when our country needs a deep intellectual talent pool the squandering of these bright young minds is a national tragedy There are hundreds of thousands of highly gifted children in the U.S. and millions more whose intelligence is above average yet few receive the education they deserve Many school districts have no gifted programs or offer only token enrichment classes Education of the gifted is in this sorry state say the Davidsons because of indifference lack of funding and the pernicious notion that education should have a leveling effect a one size fits all concept that deliberately ignores the needs of the gifted But all children are entitled to an appropriate education insist the authors those left behind as well as those who want to surge ahead The Davidsons show parents and educators how to reach and challenge gifted students They offer practical advice based on their experience as founders of a nonprofit organization that assists gifted children They show parents how to become their children's advocates how to win support for gifted students within the local schools and when and how to go outside the school system They discuss everything from

acceleration skipping a grade to homeschooling and finding mentors for children They tell stories of real parents and students who overcame poor schooling environments to discover the joy of learning **Genius Denied** is an inspiring book that provides a beacon of hope for children at risk of losing their valuable gift of intellectual potential **The Survival Guide for Gifted Kids** Judy Galbraith,2013-08-06 Help gifted children realize they re not alone they re not weird and being smart is a bonus not a burden Based on a survey of 1 000 gifted kids this retitled edition of the classic Gifted Kids Survival Guide is fully updated with the latest research Readers learn how to cope with high expectations perfectionism labels bullying friendships and more Upbeat informative friendly and compact **The Survival Guide for Gifted Kids** is a must for young gifted children At a time when many school gifted programs are scaling back it s more important than ever for kids to have this essential guide to growing up gifted **Survival Guides for Kids Helping Kids Help Themselves** Straightforward friendly and loaded with practical advice the **Free Spirit Survival Guides for Kids** give kids the tools they need to not only survive but thrive With plenty of realistic examples and bright illustrations they are accessible encouraging kid friendly and even life changing **The Risks of Knowing** Karen Zelan,2013-06-29 It gives me great pleasure to introduce this important and fascinating book on the internal dilemmas youngsters face in school which often cause them to stop learning We are all too ready to ascribe learning problems to an inability to learn and leave it at that This book should go a long way toward convincing us that using such simpleminded explanations and remedial efforts based on them do not work Unlike other books that identify the causes of learning disabilities in children or that detail society s impact on the so called helpless child **The Risks of Knowing** is an in depth study of young people who for reasons of intrapsychic conflicts and of intellectual development make a negative decision about the learning process This book is unique in its thorough analysis of the conflicts young people have with learning and in its treatment prescriptions In case after case Karen Zelan demonstrates that if young people declare themselves unable to learn it is because for some valid reasons they believe learning is dangerous The reasons that cause a decision to fail often remain unconscious until they are brought to the child s awareness When the child is helped to understand the source of any inner dilemmas both child and parents are able to find better solutions to immediate learning difficulties Karen Zelan brings a rare expertise to the problems young people find in academic learning **Intelligence Reframed** Howard E Gardner,2000-09-18 Harvard psychologist Howard Gardner has been acclaimed as the most influential educational theorist since John Dewey His ideas about intelligence and creativity explicated in such bestselling books as **Frames of Mind** and **Multiple Intelligences** over 200 000 copies in print combined have revolutionized our thinking In his groundbreaking 1983 book **Frames of Mind** Howard Gardner first introduced the theory of multiple intelligences which posits that intelligence is more than a single property of the human mind That theory has become widely accepted as one of the seminal ideas of the twentieth century and continues to attract attention all over the world Now in **Intelligence Reframed** Gardner provides a much needed report on the theory its evolution and revisions He offers practical guidance on the

educational uses of the theory and responds to the critiques leveled against him. He also introduces two new intelligences: existential intelligence and naturalist intelligence, and argues that the concept of intelligence should be broadened but not so absurdly that it includes every human virtue and value. Ultimately, argues Gardner, possessing a basic set of seven or eight intelligences is not only a unique trademark of the human species but also perhaps even a working definition of the species. Gardner also offers provocative ideas about creativity, leadership, and moral excellence, and speculates about the relationship between multiple intelligences and the world of work in the future.
