NIH Almanac National Institutes of Health (U.S.). Division of Public Information, **Mechanizing Proof** Donald MacKenzie, 2004-01-30 Most aspects of our private and social lives our safety the integrity of the financial system the functioning of utilities and other services and national security now depend on computing But how can we know that this computing is trustworthy In *Mechanizing Proof* Donald MacKenzie addresses this key issue by investigating the interrelations of computing risk and mathematical proof over the last half century from the perspectives of history and sociology His discussion draws on the technical literature of computer science and artificial intelligence and on extensive interviews with participants MacKenzie argues that our culture now contains two ideals of proof proof as traditionally conducted by human mathematicians and formal mechanized proof He describes the systems constructed by those committed to the latter ideal and the many questions those systems raise about the nature of proof He looks at the primary social influence on the development of automated proof the need to predict the behavior of the computer systems upon which human life and security depend and explores the involvement of powerful organizations such as the National Security Agency He concludes that in mechanizing proof and in pursuing dependable computer systems we do not obviate the need for trust in our collective human judgment

Exposing Electronics Bernard Finn, 2000-12-21 It is clear that artifacts have the power to provoke thought inspire action and arouse passions There is evidence of this in the ever increasing number of museums as well as in the ability of those museums to stimulate controversy through exhibits As a consequence much has been written analyzing the interaction between objects and museum visitors Less well recognized or understood is the value of objects for historical research In this series of books we propose to show by example how artifacts can be employed in the study of the history of science and technology in ways ranging from motivating a line of research to providing hard evidence in the solution of an otherwise insoluble problem The first volume focused on medicine in this the second volume the topic

our authors address is electronics As readers will discover there is considerable scope in the range of topics and in the range of uses of artifacts There is also a section that suggests to readers what kind of questions they might consider when they visit electrical exhibits and where those exhibits are to be found This series is sponsored by the Deutsches Museum in Munich the Science Museum in London and the Smithsonian Institution in Washington with help from professional historians in other museums and elsewhere
