Visualization in Scientific Computing '95 Riccardo Scateni, Jarke J. van Wijk, Pietro Zanarini, 2012-12-06 Visualization is nowadays indispensable to get insight into the huge amounts of data produced by large scale simulations or advanced measurement devices The use of computer graphics for scientific purposes has become a well established discipline known as Scientific Visualization Many problems still have to be solved and hence the field is a very active area for research and development This book represents results of the sixth in a well established series of international workshops on Visualization in Scientific Computing organized by the EUROGRAPHICS Association in collaboration with CRS4 Center for Advanced Studies Research and Development in Sardinia held from May 3 to May 5 1995 in Chia Italy The thirteen contributions selected for this volume cover a wide range of topics ranging from detailed algorithmic studies to searches for new metaphors A rough division can be made into the parts interaction irregular meshes volume rendering and applications Interaction in three dimensions is a challenging area for research The use of three dimensional user interfaces for more natural manipulation of three dimensional data and their visualization is natural but is far from trivial to realize Pang et al

investigate the use of common objects such as spray cans and carving knives as metaphors for visualization tools in order to provide an intuitive and natural three dimensional user interface Gibson uses a voxel based data representation not only for visualization but also for physical modeling of objects A prototype system under development for haptic exploration is discussed

Crowd Simulation Daniel Thalmann, Soraia Raupp Musse, 2012-10-03 Research into the methods and techniques used in simulating crowds has developed extensively within the last few years particularly in the areas of video games and film Despite recent impressive results when simulating and rendering thousands of individuals many challenges still exist in this area The comparison of simulation with reality the realistic appearance of virtual humans and their behavior group structure and their motion and collision avoidance are just some examples of these challenges For most of the applications of crowds it is now a requirement to have real time simulations which is an additional challenge particularly when crowds are very large Crowd Simulation analyses these challenges in depth and suggests many possible solutions Daniel Thalmann and Soraia Musse share their experiences and expertise in the application of Population modeling Virtual human animation Behavioral models for crowds The connection between virtual and real crowds Path planning and navigation Visual attention models Geometric and populated semantic environments Crowd rendering The second edition presents techniques and methods developed since the authors first covered the simulation of crowds in 2007 Crowd Simulation includes in depth discussions on the techniques of path planning including a new hybrid approach between navigation graphs and potential based methods The importance of gaze attention individuals appearing conscious of their environment and of others is introduced and a free of collision method for crowds is also discussed
