As the looming consequences of climate change increasingly dominate our visions of the future media coverage and public discourse often focus on how an altered climate will inevitably and unevenly reshape human life across the globe Amid predictions of mass displacement food shortages conflict over resources and widespread health problems many people are newly reckoning with a very old idea that the conditions of our climate will inexorably determine our future This book examines the intellectual architecture of the once widely trafficked belief that climate exerts an ineluctable power over the human species shaping everything from the wealth of nations to human health from the outbreak of hostilities to the evolution of the brain and mental wellbeing The book is organized around four themes health wealth war and mind Each section opens with contemporary anxieties about the influence of an altered climate before tracing the history of these fixations back to much earlier pronouncements on climate s influence Livingstone illustrates how the specter of climatic influence has been used variously to explain interpret and redraw the world and how it played a significant role in the development and justification of some of history s most destructive worldviews He cites examples where climate has been critically implicated in the politics of imperial control labor power and race relations to explain industrial development economic breakdown and market performance as a marker for national character and cultural collapse as an explanation for past warfare and civil conflict today and as a critical factor in psychological disorders patterns of suicide and the prevalence of acute psychosis The book overall traces a powerful set of ideas that has spanned human history and that continue to shape the modern world in various forms to this day      **The climate of Jamaica** James Cecil Phillippo,1876      The Global Governance of Climate Change John J. Kirton,Ella Kokotsis,2016-03-03 Climate change control has risen to the top of the international agenda Failed efforts centred in the United Nations to allocate responsibility have resulted in a challenge now reaching crisis stage John J Kirton and Ella Kokotsis analyse the generation and effectiveness of four decades of intergovernmental regimes for controlling global climate change Informed by international relations theories and critical of the prevailing UN approach Kirton and Kokotsis trace the global governance of climate change from its 1970s origins to the present and demonstrate the effectiveness of the plurilateral summit alternative grounded in the G7 8 and the G20 Topics covered include G7 8 and UN competition and convergence on governing climate change Kyoto obligations and the post Kyoto regime The role of the G7 8 and G20 in generating a regime beyond Kyoto Projections of and prescriptions for an effective global climate change control regime for the twenty first century This topical book synthesizes a rich array of empirical data including new interview and documentary material about G7 8 and G20 governance of climate change and makes a valuable contribution to understanding the dynamics of governing climate change It will appeal to scholars

researchers and policy makers interested in the dynamics behind governance processes within the intergovernmental realm

**Why Climate Breakdown Matters** Rupert Read, 2022-07-14 Climate change and the destruction of the earth is the most urgent issue of our time We are hurtling towards the end of civilisation as we know it With an unflinching honest approach Rupert Read asks us to face up to the fate of the planet This is a book for anyone who wants their philosophy to deal with reality and their climate concern to be more than a displacement activity As people come together to mourn the loss of the planet we have the opportunity to create a grounded hopeful response This meaningful hopefulness looks to the new communities created around climate activism Together our collective mourning enables us to become human in ways previously unknown Why Climate Breakdown Matters is a practical guide on how to be a radical responsible climate activist

Metaphor and Argumentation in Climate Crisis Discourse Anaïs Augé, 2023-06-28 This volume sheds light on the argumentative role of metaphor in climate change discourse unpacking the ways in which stakeholders use specific metaphors to influence perceptions of the climate crisis While existing research has explored the explanatory function of metaphors in communication on climate change this book offers an alternative view one which posits that metaphors can go beyond disseminating scientific observations to promoting biases in the depiction of these observations Aug analyses oft used ideas in climate change communication such as greenwashing drawn from a wide ranging corpus spanning media discourse scientific discourse NGO communications political speech and social media messages in English The book presents an overview of different arguments conveyed through metaphors around five key themes climate change mitigation the evolution of climate change global and local effects the significance of climate change in specific countries and the

relationship between climate change and other contemporary social issues The volume highlights how the complexity of climate change often necessitates the use of metaphor and the value of further research on the argumentative function of metaphor in elucidating its ideological dimensions in climate crisis discourse This book will be of interest to scholars in discourse analysis corpus linguistics cognitive linguistics and environmental communication

**Risk and Resilience in the Era of Climate Change** Vinod Thomas, 2024-09-03 This book presents essential insights on the interaction between rising risks and raising the bar for resilience during the climate crisis Its timeliness lies in applying important findings on risk and resilience to runaway climate change When risk and resilience are brought together in the context of climate catastrophes three key messages emerge The first is that accounting for the root causes and not just their symptoms is essential to slowing these events It is therefore vital to link carbon emissions from human activity to the sharp rise in climate disasters globally The second is that growth economics and policy must factor in the failure of governments and businesses to tackle spillover harm from economic activities as seen strikingly with global warming AND BIODIVERSITY LOSS With climate risks rising this calls for a fundamental revision of the framing of growth in the teaching and practice of business and economics And third prevention must become a far bigger part of resilience building with preparedness to avert or handle tougher eventualities built into interventions Emphasis on prevention deems disaster recovery as not just returning to how things were but building back better
