

The image is a promotional artwork for the game 'The First Descendant'. It features two main characters in a desolate, post-apocalyptic environment. The central figure is a large, male character wearing dark, heavily armored combat gear with glowing orange and yellow accents. He holds a large, futuristic assault rifle. To his left, a smaller female character in dark tactical clothing is shown in a dynamic pose, holding a smaller weapon. The background is a hazy, orange-tinted landscape with skeletal remains of trees and structures. In the upper right, a large, white, dome-shaped structure is visible. The title 'THE FIRST DESCENDANT' is overlaid in a large, white, distressed font at the bottom.

Adams Vinton, 1858 *Scriptinformatics* Dr. habil. Gábor Hosszú, 2021-02-05 Scripts writing systems usually belong to specific languages and have temporal spatial and cultural characteristics The evolution of scripts has been the subject of research for a long time This is probably because the long term development of human thinking is reflected in the surviving script relics many of which are still undeciphered today The book presents the study of the script evolution with the mathematical tools of systematics phylogenetics and bioinformatics In the research described the script is the evolutionary taxonomic unit taxon which is analogous to the concept of biological species Among the methods of phylogenetics phenetics classifies the investigated taxa on the basis of their morphological similarity and does not primarily examine genealogical relationships Due to the scarcity of morphological diversity of scripts features random coincidences of evolution independent features are much more common in scripts than in biological species thus phenetic modelling based solely on morphological features can lead to erroneous results For this reason phenetic modeling has been extended with evolutionary considerations thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences homoplasies characterizing each script The book describes an extended phenetic method developed to investigate the script evolution This data driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts The elaborated phenetic and evolutionary analyses were applied to the Rovash scripts used on the Eurasian Steppe Grassland including the Turkic Rovash Turkic Runic runiform and the Székely Hungarian Rovash The evaluation of the extended phenetic model of the scripts the various phenograms the script spectra and the group spectra helped to reconstruct the main ancestors and evolutionary stages of the investigated scripts The Cartesian Semantics of the Port Royal Logic John N.

Martin, 2019-11-04 This book sets out for the first time in English and in the terms of modern logic the semantics of the Port Royal Logic *La Logique ou l'Art de penser* 1662 1685 of Antoine Arnauld and Pierre Nicole perhaps the most influential logic book in the 17th and 18th centuries Its goal is to explain how the Logic reworks the foundation of pre Cartesian logic so as to make it compatible with Descartes metaphysics The Logic's authors forged a new theory of reference based on the medieval notion of objective being which is essentially the modern notion of intentional content Indeed the book's central aim is to detail how the Logic reoriented semantics so that it centered on the notion of intentional content This content which the Logic calls comprehension consists of an idea's defining modes Mechanisms are defined in terms of comprehension that rework earlier explanations of central notions like conceptual inclusion signification abstraction idea restriction sensation and most importantly within the Logic's metatheory the concept of idea extension which is a new technical concept coined by the Logic Although Descartes is famous for rejecting Aristotelianism he says virtually nothing about technical concepts in logic His followers fill the gap By putting to use the doctrine of objective being which had been a relatively minor part of medieval logic they preserve more central semantic doctrines especially a correspondence theory of truth A recurring theme

of the book is the degree to which the Logic hews to medieval theory This interpretation is at odds with what has become a standard reading among French scholars according to which this 16th century work should be understood as rejecting earlier logic along with Aristotelian metaphysics and as putting in its place structures more like those of 19th century class theory
