Descent of Man and Selection in Relation to Sex Charles Darwin, 2004 Excerpt from The Descent of Man and Selection in Relation to Sex The nature of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my Origin of Species that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva *personne en Europe au moins n'ose plus soutenir la création indépendante et de toutes pièces des espèces* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works The Descent of Man, and Selection in Relation to Sex Charles Darwin, 2016-09-01 The Descent of Man and Selection in Relation to Sex is a book by Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society **The Descent of Man**, Charles Darwin, 1888 **The Descent of Man and Selection in Relation to Sex** Charles DARWIN, 2021-08-22 The Descent of Man and Selection in Relation to Sex was originally published in 1871 and is a book written by evolutionary theorist Charles Darwin In it Darwin explores evolutionary theory and natural selection building upon his already well known ideas of evolution Specifically he delves into the relationship between sexual selection and society The book was generally well received at that time with a significant number of copies sold However Darwin's ideas were already well known and discussed in the scientific community by the time the book came out This resulted in a generally positive

reception by the public and the scientific community but little surprise owing to the fact that there were no significantly new revelations

Considered one of the most significant pieces of his life's work Charles Darwin's [The Descent of Man](#) forever shaped our understanding of human evolution Picked apart in 1871 for its controversial content Darwin's findings explore two essential facets of evolutionary theory natural selection and sexual selection Pointing to undeniable anatomical mental and social similarities Darwin asserts not just that all races of humanity share a single origin but that we share common ancestors with other animals and have evolved in similar ways Under sexual selection he argues that females choosing among competing males has determined our differentiating racial characteristics Though aspects of [Descent](#) have been met with contention to this day this book is a must read for anyone curious about humanity and its origin Featuring an appendix of discussion questions this Diversions Classics edition is ideal for use in book groups and classrooms For more classic titles like this visit [www.diversionbooks.com/ebooks/diversion-classics](http://www.diversionbooks.com/ebooks/diversion-classics)

*The Descent of Man Selection in Relation to Sex* Charles Darwin *The Descent of Man and Selection in Relation to Sex* is a book by English naturalist Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society

THE NATURE of the following work will be best understood by a brief account of how it came to be written During many

years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views. It seemed to me sufficient to indicate in the first edition of my *Origin of Species* that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth. Now the case wears a wholly different aspect. When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva 1869 *personne en Europe au moins n'ose plus soutenir la création indépendante et de toutes pièces des espèces* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists. The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance. Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form. Includes *Principles of Sexual Selection* *Secondary Sexual Characters in the Lower Classes of the Animal Kingdom* *Secondary Sexual Characters of Insects* *Insects Continued* *Order Lepidoptera* *Secondary Sexual Characters of Fishes* *Amphibians and Reptiles* *Secondary Sexual Characters of Birds* *Birds Continued* *Birds Continued* *Secondary Sexual Characters of Mammals* *Secondary Sexual Characters of Mammals Continued* Plus more. *The Descent of Man, and Selection in Relation to Sex Volume 1* Charles Darwin, 2013-09. Not illustrated. 1872 edition. Excerpt: been important they would long ago have been either fixed and preserved or eliminated. In this respect man resembles those forms called by naturalists protean or polymorphic which have remained extremely variable owing as it seems to their variations being of an indifferent nature and consequently to their having escaped the action of natural selection. We have thus far been baffled in all our attempts to account for the differences between the races of man but there remains one important agency namely Sexual Selection which appears to have acted as powerfully on man as on many other animals. I do not intend to assert that sexual selection will account for all the differences between the races. An unexplained residuum is left about which we can in our ignorance only say that as individuals are continually born with for instance heads a little rounder or narrower and with noses a little longer or shorter such slight differences might become fixed and uniform if the unknown agencies which induced them were to act in a more constant manner aided by long continued intercrossing. Such modifications come under the provisional class alluded to in our fourth chapter which for the want of a better term have been called spontaneous variations. Nor do I pretend that the effects of sexual selection can be indicated with scientific precision but it can be shown that it would be an inexplicable fact if man had not been modified by this agency which has acted so powerfully on innumerable animals both high and low in the scale. It can further be shown that the differences between the races of man as

in color hairiness form of features etc are of the nature which it might have been expected would have been acted on by

**Annotated** Charles Darwin, 2020-09-17 In the current resurgence of interest in the biological basis of animal behavior and social organization the ideas and questions pursued by Charles Darwin remain fresh and insightful This is especially true of *The Descent of Man and Selection in Relation to Sex* Darwin's second most important work This edition is a facsimile reprint of the first printing of the first edition 1871 not previously available in paperback The work is divided into two parts Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals Darwin shows that human mental and emotional capacities far from making human beings unique are evidence of an animal origin and evolutionary development Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment but rather to confer an advantage in sexual competition These two themes are drawn together in two final chapters on the role of sexual selection in humans In their Introduction Professors Bonner and May discuss the place of *The Descent* in its own time and relation to current work in biology and other disciplines
