Life with Two Languages François Grosjean, 1982

Many people consider bilinguals to be exceptional yet almost half the world's population speaks more than one language Bilingualism is found in every country of the world in every class of society in all age groups Life with Two Languages is the first book to provide a complete and authoritative look at the nature of the bilingual experience François Grosjean himself a bilingual covers the topic from each of its many angles in order to provide a balanced introduction to this fascinating phenomenon Grosjean discusses the political and social situations that arise when languages come into contact and the policies nations have established toward their linguistic minorities in the domains of education and governance Of particular interest is his detailed account of the psychological and social factors that lead a bilingual to choose one of her languages when speaking to another bilingual or to use both languages in the fascinating phenomenon of code switching The author explains how children become bilingual as quickly as they become monolingual describes the organization of languages in the bilingual brain and examines the legacy of bilingualism on language as exemplified in word borrowings Above all Life with Two Languages puts the emphasis on the bilingual person In a series of first hand reports scattered throughout the book bilinguals tell what it is like to live with two languages and describe the educational and social experiences they have undergone Written in a clear and informative style Life with Two Languages will appeal to professionals and students in linguistics education sociology and psychology as well as to the more casually curious

How the Brain Got Language,

Unlike any other species humans can learn and use language This book explains how the brain evolved to make language possible through what Michael Arbib calls the Mirror System Hypothesis Because of mirror neurons monkeys chimps and

humans can learn by imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign languages have emerged in recent decades and in the historical processes of language change on a time scale from decades to centuries Though the subject is complex this book is highly readable providing all the necessary background in primatology neuroscience and linguistics to make the book accessible to a general audience

Language, from a Biological Point of View Cedric Boeckx, María del Carmen Horno-Chéliz, 2012-03-15 The present volume offers a collection of essays covering a broad range of areas where currently a rapprochement between linguistics and biology is actively being sought Following a certain tradition we call this attempt at a synthesis biolinguistics The nine chapters grouped into three parts Language and Cognition Language and the Brain and Language and the Species offer a comprehensive overview of issues at the forefront of biolinguistic research such as language structure language development linguistic change and variation language disorders and language processing the cognitive neural and genetic basis of linguistic knowledge or the evolution of the Faculty of Language Each contribution highlights exciting prospects for the field but they also point to significant obstacles along the way The main conclusion is that the age of theoretical exclusivity in Linguistics much like the age of theoretical specificity will have to end if

interdisciplinarity is to reign and if biolinguistics is to flourish *The Handbook of the Neuropsychology of Language*

one of the most distinctive behavioural adaptations on the planet Languages evolved in only one species in only one way without precedent and without parallel Hundreds of millions of years of evolution have produced hundreds of thousands of species with brains and tens of thousands with complex learning abilities Only one of these has ever wondered about its place in the whole scheme because only one through its language evolved with the ability to do so This book aims to alter the understanding of what it means to be human the universe isn't a soulless blindly spinning clockwork but instead nascent heart and mind
