The Last 10,000 Years Paul S. Martin, 2022-01-04 Pollen analysis offers an approach to understanding the Southwestern environment its history and in some respects its possible future Dr Martin's study is an example of geochronology functioning as a strong interdisciplinary link among archaeologists biogeographers geologists paleoclimatologists and ecologists *Ten Thousand Years of Cultivation at Kuk Swamp in the Highlands of Papua New Guinea* Jack Golson, Tim Denham, Philip Hughes, Pamela Swadling, John Muke, 2017-07-07 Kuk is a settlement at c 1600 m altitude in the upper Wahgi Valley of the Western Highlands Province of Papua New Guinea near Mount Hagen the provincial capital The site forms part of the highland spine that runs for more than 2500 km from the western head of the island of New Guinea to the end of its eastern tail Until the early 1930s when the region was first explored by European outsiders it was thought to be a single uninhabited mountain chain Instead it was found to be a complex area of valleys and basins inhabited by large populations of people and pigs supported by the intensive cultivation of the tropical American sweet potato on the slopes above swampy valley bottoms With the end of World War II the area with others became a focus for the development of coffee and tea plantations of which the establishment of Kuk Research Station was a result Large scale drainage of the swamps produced abundant evidence in the form of stone axes and preserved wooden digging sticks and spades for their past use in cultivation Investigations in 1966 at a tea plantation in the upper Wahgi Valley by a small team from The Australian National University yielded a date of over 2000 years ago for a wooden stick collected from the bottom of a prehistoric ditch The establishment of Kuk Research Station a few kilometres away shortly afterwards provided an ideal opportunity for a research project *Literature 1988, Part 2* Astronomisches Rechen-Institut, 2013-06-29 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine 2 **New Jersey Pinelands National Reserve Management Plan**, 1980 *GENERAL BIOLOGY I* Dennis Holley, 2017-05-31 *GENERAL BIOLOGY* Investigating Life is an introductory level college biology textbook that provides

Plows, Plagues, and Petroleum William F. Ruddiman, 2016-10-04 The impact on climate from 200 years of industrial development is an everyday fact of life but did humankind's active involvement in climate change really begin with the industrial revolution as commonly believed *Plows Plagues and Petroleum* has sparked lively scientific debate since it was first published arguing that humans have actually been changing the climate for some 8 000 years as a result of the earlier discovery of agriculture The Ruddiman Hypothesis will spark intense debate We learn that the impact of farming on greenhouse gas levels thousands of years before the industrial revolution kept our planet notably warmer than if natural climate cycles had prevailed quite possibly forestalling a new ice age *Plows Plagues and Petroleum* is the first book to trace the full historical sweep of human interaction with Earth's climate Ruddiman takes us through three broad stages of human history when nature was in control when humans began to take control discovering agriculture and affecting climate through carbon dioxide and methane emissions and finally the more recent human impact on climate change Along the way he raises the fascinating possibility that plagues by depleting human populations also affected reforestation and thus climate as suggested by dips in greenhouse gases when major pandemics have occurred While our massive usage of fossil fuels has certainly contributed to modern climate change Ruddiman shows that industrial growth is only part of the picture The book concludes by looking to the future and critiquing the impact of special interest money on the global warming debate In the afterword Ruddiman explores the main challenges posed to his hypothesis and shows how recent investigations and findings
