Abstract

Background: Problem-solving competences have evolved into key skills for professionals. Computer-based business simulations enable the analysis of problem-solving processes beyond end results. An important aspect of successful problem-solving is to systematically use built-in tools and process the provided information efficiently.

Objectives: This investigation explores the relationship between students' tool use, information retrieval, and problem-solving success in a computerized problem-solving office simulation.

Methods: Around 30,000 recorded behavioural log data points of 432 German vocational students were analysed.

Results and Conclusion: Distinct user groups are identified and cognitive problem-solving competences are assessed to draw a link between behaviour and performance. An explorative cluster analysis based on student behaviour revealed four clusters. Significant results support the use of two cognitive tools that lead to success. One successful behaviour is using a notepad, a domain-general and voluntary tool. Another successful problem-solving behaviour is the use of a domain-specific and solution-relevant spreadsheet program. Note-taking organizes information and mental processes while the spreadsheet leads to efficient computing. In line with other studies, students with higher problem-solving competences tend to access tools and documents providing information more frequently.

Takeaways: Domain-general tool use differs from domain-specific tool use over time. There are two different successful behaviour patterns in complex problem solving. Instructional and simulation designers should provide specific tools to support students as well as tackle problems.

Advances in the Computer Simulations of Liquid Crystals Paolo Pasini, Claudio Zannoni, 2013-11-11

Computer simulations provide an essential set of tools for understanding the macroscopic properties of liquid crystals and of their phase transitions in terms of molecular models While simulations of liquid crystals are based on the same general Monte Carlo and molecular dynamics techniques as are used for other fluids they present a number of specific problems and peculiarities connected to the intrinsic properties of these mesophases The field of computer simulations of anisotropic fluids is interdisciplinary and is evolving very rapidly The present volume covers a variety of techniques and model systems from lattices to hard particle and Gay Berne to atomistic for thermotropics lyotropics and some biologically interesting liquid crystals Contributions are written by an excellent panel of international lecturers and provides a timely account of the techniques and problems in the field

Collaborative Research Design Per Vagn Freytag, Louise Young, 2017-09-27

This book articulates and interconnects a range of research methods for the investigation of business management processes It introduces new directions that both recognise the business community as stakeholders

in the research process and seek to include them in that process The book presents a range of contemporary research methods with particular focus on those that allow insights into business managers thoughts and behaviours It includes fresh views on traditional research designs for example new approaches to using literature reviews experiments interviews and observation studies It also considers cutting edge research methods such as the use of vignettes workshops improvisation and theatre as well as computer based simulation In addition to discussing new approaches to data capture and data generation it presents new methods of data analysis by considering various forms of models and modelling new forms of computer aided text analysis and innovative approaches to data display Finally the book provides a link between the philosophical underpinnings of research and the different research methods presented This is often neglected but undertaking the knowledge generating journey that is research includes having a view on reality and marrying this to beliefs about how the reality to be investigated can be best expedited

Mapping the Posthuman Grant Hamilton, Carolyn Lau, 2023-12-22 This book works to delineate some of the major routes by which science and art intersect Structured according to the origin myths of the posthuman that continue to shape the idea of the human in our technological modernity this volume gives space to narratives of alter modernity that resonate with Ursula K Le Guin s call for a new kind of story which exposes the violence and exploitation driven by a sustained belief in human exceptionalism anthropocentrism and cultural superiority In this context the posthuman myths of multispecies flourishing given in this collection which are situated across a range of historical times and locations and media and modalities are to be thought of as kernels of possible futures that can only be realized through collective endeavour

Metal and Ceramic Based Composites S.T. Mileiko, 1997-12-12 Modern scientific and

technological fields are frequently of an interdisciplinary nature and the field of fibrous composites is no exception Unlike fibre reinforced plastics the family of metal and ceramic based composites is still quite a new group of materials with a large variety of mechanical and physical properties Up until now it has been difficult to produce these materials as the necessary technical information has not been well documented The main purpose of this book is to link together fabrication structure and properties chains so as to clarify which structure provides the necessary properties and how one can attain the correct composite structure To this end the book not only contains topics of a purely technical nature but also a description of the failure mechanics of metal and ceramic matrix composites as this is the key to understanding the structure properties segment of the chain mentioned The book is divided into three parts Part I presents a general view of composites with the accent on metal and ceramic matrix composites It also contains a brief description of modern fibres and composites and can be considered at least for beginners as a starting point for further study Part II looks at the composite microstructures considered to be either optimal or reasonable in resisting a particular loading Finally Part II describes a variety of mechanical physical and chemical potential for organizing these microstructures Experimental data on technologies material structures and material properties are used throughout the book to support theoretical conclusions or to obtain important physical parameters

Epistemological Aspects of Computer Simulation in the Social Sciences Flaminio Squazzoni, 2009-04-21 This volume collects the revised versions of the invited and selected papers that were presented at the Second EPOS Epistemological Perspectives on Simulation Workshop held in Brescia Italy in October 2006 EPOS is a bi annual cross disciplinary workshop on simulation originally established by Ulrich Frank and Klaus G Troitzsch with a first edition held in Koblenz in July 2004 EPOS aims to provide a forum for scholars from various disciplines such as the social sciences computer sciences engineering and natural sciences who are interested in discussing epistemological aspects of computer simulation across disciplinary boundaries The common belief behind the workshop is the recognition that the time has come to seriously reflect on epistemological and methodological preconditions processes and consequences of simulation as a research tool During the first edition in Koblenz 2004 a number of interesting topics were fully addressed the link between theory and

simulation models the empirical validation of agent based models in the natural and the social sciences the relation between models and truth as well as the role of stylized facts in evidence based models A good cross disciplinary atmosphere permeated the workshop making possible the exchange of knowledge and ideas beyond any disciplinary boundary The first EPOS proceedings were edited by Ulrich Frank and Klaus G Troitzsch and published in the Journal of Artificial Societies and Social Simulation Vol 8 No 4 2005
