*Absolute* Simon F. Oliai, 2014-12-30 Our contemporary world presents a seemingly inexplicable paradox It is a world where interaction among societies of different cultural traditions has never been easier A world in which modern technology has visibly overcome the physical barriers that had long condemned the majority of men to relative isolation from one another Yet our world is also one in which the illusion of a lost original cultural or religious identity grounded by a metaphysical absolute pits men against one another A physically more accessible world has thus become an increasingly fundamentalist one In this book written in the wake of such influential European thinkers as Nietzsche Heidegger Foucault Derrida and Vattimo Simon Oliai analyzes the conceptual underpinnings of this paradox and argues that unless the European affirmation of man's finite existence becomes universal we shall never rid ourselves to echo Nietzsche of the repressive shadow of a long dead metaphysical idol

Artificial Immune Systems Emma Hart, Chris McEwan, Jon Timmis, Andy Hone, 2010-07-16 Artificial immune systems AIS is a diverse and maturing area of research that bridges the disciplines of immunology and computation The original research impetus in AIS had a clear focus on applying immunological principles to computational problems in practical domains such as computer security data mining and optimization As the field has matured it has diversified such that we now see a growing interest in formalizing the theoretical properties of earlier approaches elaborating underlying relationships between applied computational models and those from theoretical immunology as well a return to the roots of the domain in which the methods of computer science are being applied to immunological modelling problems Following the trends in the field the ICARIS conference intends to provide a forum for all these perspectives The 9th International Conference on AIS ICARIS 2010 built on the success of previous years providing a convenient vantage point for

broader reflection as it returned to Edinburgh the venue of the Second ICARIS in 2003. This time the conference was hosted by Edinburgh Napier University at its Craiglockhart Campus, recently reopened after extensive refurbishment which has resulted in a stunning building and state-of-the-art facilities. The extent to which the field has matured over the preceding years is clear: a substantial track of theoretical research now underpins the discipline. The applied stream has expanded in its outlook and has examples of AIS algorithms being applied across a wide spectrum of practical problems ranging from sensor networks to semiconductor design.
