Darwin's First Theory Rob Wesson,2017-04-11 Everybody knows or thinks they know Charles Darwin the father of evolution and the man who altered the way we view our place in the world But what most people do not know is that Darwin was on board the HMS Beagle as a geologist on a mission to examine the land not flora and fauna Tracing Darwin s footsteps in South America and beyond geologist Rob Wesson sets out on a trek across the Andes repeating the nautical surveys made by the Beagle s crew hunting for fossils in Uruguay and Argentina and explores traces of long vanished glaciers in Scotland and Wales By following Darwin s path literally and intellectually Rob experiences the landscape that absorbed Darwin followed his reasoning about what he saw and immerses himself in the same questions about the earth Upon Darwin s return from the five year journey he conceived his theory of tectonics his first theory These concepts and attitudes the vastness of time the enormous cumulative impact of almost imperceptibly slow change change as a constant feature of the environment underlie his subsequent discoveries in evolution And this peculiar way of thinking remains vitally important today as we enter the Anthropocene
