On the right is a chalkboard with several mathematical formulas written on it, including $3 = \pm \sqrt{5} + z$, $[0, 9]$, and $G = m_1 m_2 / r^2$. At the bottom left, there is a book with a red cover and a white page. The title "THE HISTORY OF MATHEMATICS" is written in large, blue, 3D-style capital letters across the center of the image.

Turning Points in the History of Mathematics Hardy Grant, Israel Kleiner, 2016-04-15. This book explores some of the major turning points in the history of

mathematics ranging from ancient Greece to the present demonstrating the drama that has often been a part of its evolution Studying these breakthroughs transitions and revolutions their stumbling blocks and their triumphs can help illuminate the importance of the history of mathematics for its teaching learning and appreciation Some of the turning points considered are the rise of the axiomatic method most famously in Euclid and the subsequent major changes in it for example by David Hilbert the wedding via analytic geometry of algebra and geometry the taming of the infinitely small and the infinitely large the passages from algebra to algebras from geometry to geometries and from arithmetic to arithmetics and the revolutions in the late nineteenth and early twentieth centuries that resulted from Georg Cantor's creation of transfinite set theory The origin of each turning point is discussed along with the mathematicians involved and some of the mathematics that resulted Problems and projects are included in each chapter to extend and increase understanding of the material Substantial reference lists are also provided Turning Points in the History of Mathematics will be a valuable resource for teachers of and students in courses in mathematics or its history The book should also be of interest to anyone with a background in mathematics who wishes to learn more about the important moments in its development

Historiography of Mathematics in the 19th and 20th Centuries Volker R. Remmert, Martina R. Schneider, Henrik Kragh Sørensen, 2016-12-08 This book addresses the historiography of mathematics as it was practiced during the 19th and 20th centuries by paying special attention to the cultural contexts in which the history of mathematics was written In the 19th century the history of mathematics was recorded by a diverse range of people trained in various fields and driven by different motivations and aims These backgrounds often shaped not only their writing on the history of mathematics but in some instances were also influential in their subsequent reception During the period from roughly 1880 1940 mathematics modernized in important ways with regard to its content its conditions for cultivation and its identity and the writing of the history of mathematics played into the last part in particular Parallel to the modernization of mathematics the history of mathematics gradually evolved into a field of research with its own journals societies and academic positions Reflecting both a new professional identity and changes in its primary audience various shifts of perspective in the way the history of mathematics was and is written can still be observed to this day Initially concentrating on major internal universal developments in certain sub disciplines of mathematics the field gradually gravitated towards a focus on contexts of knowledge production involving individuals local practices problems communities and networks The goal of this book is to link these disciplinary and methodological changes in the history of mathematics to the broader cultural contexts of its practitioners namely the historians of mathematics during the period in question
