**The Re-Attribution of the British Renaissance Corpus** Anna Faktorovich, 2023-05-02 The first accurate quantitative re attribution of all central texts of the British Renaissance Describes and applies the first unbiased and accurate method of computational linguistics authorial attribution Covers 303 texts with 8 106 059 words 123 authorial bylines a range of genres and a timespan between 1510 and 1662 Includes helpful diagrams that visually show the quantitative matches and the identical most frequent phrases between the texts in each linguistic signature group Detailed chronologies for each of the six ghostwriters and the bylines they wrote under including their dates of birth death publications and other biographical markers that explain why each of them was the only logical attribution A full bibliography of the 303 tested texts All of the raw and processed data not only in summary tables inside of the book but also in full on a publicly accessible website <https://github.com/faktorovich/Attribution> One table includes all of the data from the first edition title pages byline printer bookseller date proverbs and the first performance date troupe A table on structural elements across all Shakespeare bylined texts summarizes their plot movements character types settings slang usage primary sources and poetic design percentage of rhyme and hendiadys To explain why these are the first truly accurate re attributions numerous reasons for discrediting previous attribution claims are provided throughout Re Attribution of the British Renaissance Corpus describes a newly

invented for this study computational linguistics authorial attribution method and applies it and several other approaches to the central texts of the British Renaissance All of the attribution steps are described precisely to give readers replicable instructions on how they can apply them to any text from any period that they are interested in determining an attribution for This method can be applied to solving criminal linguistic mysteries such as who wrote the Unabomber Manifesto or theological mysteries such as if any of the Dead Sea Scrolls might have been forged by a modern author This method is uniquely accurate because it uses 27 different quantitative tests that measure a text's dimensions and its similarity or divergence to other texts automatically without the statisticians being able to skew the outcome by altering the experiment's analytical design *Re Attribution* guides researchers not only on how to perform the basic calculations but also how to perform the biographical and documentary research to derive who among the potential bylines in a single signature group is the ghostwriter while the others are merely ghostwriter contractors or pseudonyms Reliable accuracy is achieved by also performing other types of attribution tests to check if these alternative approaches validate or contradict the 27 tests findings Non quantitative tests discussed include deciphering the hidden implications of contemporary pufferies as well as comparing structural elements such as characters plot and element borrowings Part II presents a revised version of the history of the birth of the theater in Britain by reviewing forensic accounting evidence in Philip Henslowe's *Diary* and the documented history of homicidal lending practices and government corruption connected with troupes and theaters Parts III VIII explain precisely how this series derived that the British Renaissance was ghostwritten by only six linguistic signatures Richard Verstegan Josuah Sylvester Gabriel Harvey Benjamin Jonson William Byrd and William Percy The parts on each of these ghostwriters not only explain how their biographies fit with the timelines of the texts being attributed to them but also provide various types of evidence that explains their motives for ghostwriting And Part IX returns for an intricate analysis of a few pseudonyms or ghostwriting contractors who were uniquely difficult to exclude as potential ghostwriters in parallel these chapters question the reasons these individuals would have needed to purchase ghostwriting services The complete series on British Renaissance *Re Attribution* and *Modernization* by Anna Faktorovich is a remarkable accomplishment Based on her own unbiased method of computational linguistic authorial attribution she has critically examined an entire collection of texts many previously inaccessible and untranslated to modern English From a variety of distinct factors that have been ignored or unnoticed in the past she identifies a group of ghost writers behind many miss attributed Renaissance works Of particular interest are works traditionally attributed to William Shakespeare Dr Faktorovich is a prolific writer very well informed in English literature philology and literary criticism and she is clearly thorough and detail oriented Her *re attribution* and *modernization* series demonstrates solid scholarship fresh perspective and willingness to challenge conventional thought and methodology *Midwest Book Review* Lesly F Massey December 2021 I have long had an interest in linguistics and enjoy reading the frequent *Who really wrote Shakespeare's works* Therefore this book was extremely

Imagine a common movie scene a hero confronts a villain Captioning such a moment would at first glance seem as basic as transcribing the dialogue But consider the choices involved How do you convey the sarcasm in a comeback Do you include a henchman s muttering in the background Does the villain emit a scream a grunt or a howl as he goes down And how do you note a gunshot without spoiling the scene These are the choices closed captioners face every day Captioners must decide whether and how to describe background noises accents laughter musical cues and even silences When captioners describe a sound or choose to ignore it they are applying their own subjective interpretations to otherwise objective noises creating meaning that does not necessarily exist in the soundtrack or the script Reading Sounds looks at closed captioning as a potent source of meaning in rhetorical analysis Through nine engrossing chapters Sean Zdenek demonstrates how the choices captioners make affect the way deaf and hard of hearing viewers experience media He draws on hundreds of real life examples as well as interviews with both professional captioners and regular viewers of closed captioning Zdenek s analysis is an engrossing look at how we make the audible visible one that proves that better standards for closed captioning create a better entertainment experience for all viewers      Basic Chiropractic Paraprofessional Manual ,1978      *Springer*
