My Comet Tales Nick B. Comandé, 2024-10-02
Halley's Comet circles our sun on an average of every 74-79 years with many orbits being closer to 76 years. Most people get a once in a lifetime chance to see it while there are the fortunate few who have the opportunity to experience seeing Halley's Comet twice in a lifetime. In December of 2023 as Halley's Comet was approaching the far reaches of our solar system and its furthest distance from our sun after its last rounding in 1986, Nick Comandé discovered the notes he kept when tracking Halley's Comet during its 1985-86 visit. He decided to share his observations and excitement from the 6 months he followed the comet during the different stages of its journey in what he now calls *My Comet Tales*. Böhme, Prof. Dr. Walter Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-11-11 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 33 records literature published in 1983 and received before August 1, 1983. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications. Starting with Volume 33, all the recording, correction and data processing work was done by means of computers. The recording was done by our technical staff members: Ms Helga Ballmann, Ms Mona El Choura, Ms Monika Kohl and Ms Sylvia Matyssek. Mr Martin Schlotelburg and Mr Ulrich Überall supported our task by careful proofreading. It is a pleasure to thank them all for their encouragement. Heidelberg, September 1983. The Editors.

Galileo Galilei James MacLachlan, 1999-04-15
The scientific innovations of Galileo Galilei are pivotal to our understanding of the laws of the natural world. Drawing on his diverse studies in philosophy, mathematics, mechanics, music, astronomy and engineering, Galileo developed revolutionary theories that thoroughly changed the disciplines of physics, mathematics, astronomy and technology. Galileo Galilei traces the great scientist's education, describes his maverick experiments in Padua and Pisa and recreates the ingenious pathway of his famous discoveries. Often censored and imprisoned for his radical ideas that clashed with fundamental Church doctrines.

Galileo persisted in his pursuit of scientific truths to bestow upon future generations the inspiration to challenge conventional views His theories about the motions of falling bodies his study of pendulums and his major discoveries in astronomy made with a self built telescope are all clearly explained in this volume Heavily illustrated with photographs graphics and technical schemes Galileo Galilei also features a number of sidebars elucidating important details of the great mans contributions Oxford Portraits in Science is a collection of scientific biographies for young adults Written by top scholars and writers each biography examines the personality of its subject as well as the thought process leading to his or her discoveries These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world *Astronomy*, 1987 *Seeing in a New Light*, 1990 AAAS Science Book List, 1978-1986 Kathryn Wolff, Susan M.
