Operators Arising in Population Biology Charles L. Epstein, Rafe Mazzeo, 2013-04-07 This book provides the mathematical
 foundations for the analysis of a class of degenerate elliptic operators defined on manifolds with corners which arise in a
 variety of applications such as population genetics mathematical finance and economics The results discussed in this book
 prove the uniqueness of the solution to the Martingale problem and therefore the existence of the associated Markov process
 Charles Epstein and Rafe Mazzeo use an integral kernel method to develop mathematical foundations for the study of such
 degenerate elliptic operators and the stochastic processes they define The precise nature of the degeneracies of the principal
 symbol for these operators leads to solutions of the parabolic and elliptic problems that display novel regularity properties
 Dually the adjoint operator allows for rather dramatic singularities such as measures supported on high codimensional strata
 of the boundary Epstein and Mazzeo establish the uniqueness existence and sharp regularity properties for solutions to the
 homogeneous and inhomogeneous heat equations as well as a complete analysis of the resolvent operator acting on Hilbert
 spaces They show that the semigroups defined by these operators have holomorphic extensions to the right half plane
 Epstein and Mazzeo also demonstrate precise asymptotic results for the long time behavior of solutions to both the forward
 and backward Kolmogorov equations **Operator Theory and Analysis** H. Bart, I. Gohberg, A.C.M. Ran, 2001-01-01 On
