The Uses of Style in Archaeology Margaret Wright Conkey, Christine Ann Hastorf, 1990 This book brings together essays that illustrate the different uses and interpretations of style in archaeology Style is a widely discussed and controversial issue which has always been central for archaeological interpretation The collection considers the history of style in archaeology its relationship to the concept of style in art history and how stylistic analyses will differ according to different initial assumptions The essays show how stylistic interpretation works at different levels and they debate stylistic terminologies and concepts Although these essays show that there is no unified theory of style they underline the importance of continuing creative discussion through different themes and individual case studies

The Function of Style Farshid Moussavi, 2021-04-15 What is the function of style today If the 1970s were defined by Postmodernism and the 1980s by Deconstruction how do we characterize the architecture of the 1990s to the present Some built forms transmit affects of curvilinearity others of crystallinity some transmit multiplicity others unity some transmit cellularity others openness some transmit dematerialization others weight Does this immense diversity reflect a lack of common purpose In this book acclaimed architect and theorist Farshid Moussavi argues that this diversity should not be mistaken for an eclecticism that is driven by external forces The Function of Style presents the architectural landscape as an intricate web in which individual buildings are the product of ideas which have been appropriated from other buildings designed for the different activities of everyday life ideas which are varied to produce singular buildings that are related to one another but also different This network of connections is illustrated on the cover of this book and in more detail inside Moussavi argues that by embracing everyday life as a raw material architects can change the conventions of how buildings are assembled to ground style and the aesthetic experience of buildings in the micro politics of the everyday The third volume in Moussavi's

Function series The Function of Style provides an updated approach to style which can be used as an invaluable and highly productive tool by architects today Assistant Editors Marco Ciancarella Jonathan A Scelsa Mary Crettier Kate Kilalea

A Theory of Art Stephen David Ross, 1982-01-01 The richness of art is manifested in contrast contrast with other works of art other features of human experience other times and places and other forms of judgment and understanding The possibilities of contrast are inexhaustible Every being shares this inexhaustibility of openness to novel possibilities although inexhaustibility is most fully realized in art The general theory of art and aesthetic value developed in this book is based on the notions of inexhaustibility and contrast and has important forebears in Kant Coleridge and Whitehead The theory allows art to be located relative to other spheres of judgment science action and philosophy The theory allows a new perspective on interpretation and criticism Ross presents and defines a new synthetic form of understanding works of art that offers an alternative to the skepticism that haunts so many theories of interpretation

The Interrelation of Phenomenology, Social Sciences and the Arts Michael Barber, Jochen Dreher, 2013-11-04 This book features papers written by renowned international scholars that analyze the interdependence of art phenomenology and social science The papers show how the analysis of the production as well as the perception and interpretation of art work needs to take into consideration the subjective viewpoint of the artist in addition to that of the interpreter Phenomenology allows a description of the subjectively centered life world of the individual actor artist or interpreter and the objective structures of literature music and the aesthetic domain in general The perspective of social science serves to reconstruct the socio historical structure involved in the creation and reception of the art work The authors concentrate on this specific theoretical focus which combines both phenomenology and social science and offers an innovative framework for the analysis of works of art from the fields of literature music visual arts photography and film Some of the contributions present creative interpretations of a variety of distinct art works in addition to the realization of theoretical reflections on the interdependence of arts phenomenology and social science This book features papers that were presented at the international and interdisciplinary conference Phenomenology Social Sciences and the Arts held at the University of Konstanz May 2009 in commemoration of philosopher and social scientist Alfred Schutz the developer of phenomenologically oriented sociology It will appeal to researchers scholars and students in phenomenology social sciences art theory and the arts

Morbidities and "The Concept of the New Literature" Nicolás Fernández-Medina, 2024-10-15 Ram n G me z de la Serna 1888 1963 was one of Spain s most gifted avant gardists Oftentimes remembered as the inventor of the greguer a a type of witty and humorous epigram that recasts the commonplace and absurdities of everyday reality he was a prolific writer and published dozens of novels essays short stories articles editorials and biographies throughout his life Two of his major works the autobiography *Morbidities* 1908 and the manifesto *The Concept of the New Literature* 1909 belong to his earliest period of experimentation These two early works are of singular importance not only in understanding his development as an avant gardist but also in analyzing Spanish

literature within the broader framework of European avant garde culture With prescient clarity they highlight many of the aesthetic notions that would revolutionize experimental literature throughout the modernist period This book offers the first complete English translation of Morbidities and The Concept of the New Literature and it introduces anglophone readers to some of Gomez de la Serna's most passionate ideas about modernity and new literature "The Concept of the 'Master' in Art Education in Britain and Ireland, 1770 to the Present " Matthew C. Potter, 2017-07-05 A novel investigation into art pedagogy and constructions of national identities in Britain and Ireland this collection explores the student master relationship in case studies ranging chronologically from 1770 to 2013 and geographically over the national art schools of England Ireland Scotland and Wales Essays explore the manner in which the Old Masters were deployed in education fuelled the individual creativity of art teachers and students were used as a rhetorical tool for promoting cultural projects in the core and periphery of the British Isles and united as well as divided opinions in response to changing expectations in discourse on art and education Case studies examined in this book include the sophisticated tradition of academic inquiry of establishment figures like Joshua Reynolds and Frederic Leighton as well as examples of radical reform undertaken by key individuals in the history of art education such as Edward Poynter and William Coldstream The role of Modern Masters like William Orpen Augustus John Gwen John and Jeff Wall is also discussed along with the need for students and teachers to master the realm of art theory in their studio based learning environments and the ultimate pedagogical repercussions of postmodern assaults on the academic bastions of the Old Masters The Philosophy of Chrysippus Josiah B. Gould, 1970-01-01 The Philosophy of Chrysippus is a reconstruction of the philosophy of an eminent Stoic philosopher based upon the fragmentary remains of his voluminous writings Chrysippus of Cilicia who lived in a period that covers roughly the last three quarters of the third century B C studied philosophy in Athens and upon Cleanthes' death became the third head of the Stoa one of the four great schools of philosophy of the Hellenistic period Chrysippus wrote a number of treatises in each of the major departments of philosophy logic physics and ethics Much of his fame derived from his acuteness as a logician but his importance for Stoic philosophy generally was acknowledged in antiquity in the saying Had there been no Chrysippus there would be no Stoa Previous accounts of Chrysippus philosophy including Miller's study the only work in this century which had sought to deal with Chrysippus philosophy alone blurred the distinctive contributions of Chrysippus to Stoic philosophy and failed to bring to light the peculiar features in his thought The vagueness in these accounts resulted in large measure from the assumption that if an ancient author ascribed a doctrine to the Stoics or Stoicism one could infer that the doctrine belonged to Chrysippus Professor Gould works from the more circumspect methodological principle that unless an ancient author explicitly ascribes a doctrine to Chrysippus his testimony cannot be used in reconstructing Chrysippus philosophy Working with those of the fragments in Hans von Arnim's collection Stoicorum Veterum Fragmenta which are explicitly Chrysippean in the sense suggested Mr Gould has worked out an account of Chrysippus' views in the fields of logic natural philosophy and

ethics In order that Chrysippus thought might be viewed in context Mr Gould provides a background picture by describing the third century milieu in which the Stoic philosopher worked This follows an account of Chrysippus life and reputation in antiquity and a description of modern assessments of Chrysippus position in the Stoa In his account of Chrysippus philosophy Mr Gould frequently introduces comparisons and contrasts with Plato and Aristotle to help emphasize the continuity between Hellenic and early Hellenistic philosophy Finally in a concluding chapter the author shows that the dominant themes in Chrysippus philosophy while not exhibiting a thoroughly well knit system nevertheless are woven together into a remarkably comprehensive whole which must have been extraordinarily impressive in antiquity

International Handbook of Personality and Intelligence Donald H. Saklofske, Moshe Zeidner, 2013-04-17 In this groundbreaking handbook more than 60 internationally respected authorities explore the interface between intelligence and personality by bringing together a wide range of potential integrative links drawn from theory research measurements and applications

History of Rationalities Luca Sciortino, 2023-03-11 Over time philosophers and historians of science have introduced different notions of ways of thinking This book presents compares and contrasts these different notions It focuses primarily on Ian Hacking s idea of style of reasoning in order to assess and develop it into a more systematic theory of scientific thought arguing that Hacking s theory implies epistemic relativism Luca Sciortino also discusses the implications of Hacking s ideas for the study of the problem of contingency and inevitability in the development of scientific knowledge

Central and Eastern European Literary Theory and the West Michał Mrugalski, Schamma Schahadat, Irina Wutsdorff, 2022-12-05 Literary theory flourished in Central and Eastern Europe throughout the twentieth century but its relation to Western literary scholarship is complex This book sheds light on the entangled histories of exchange and influence both within the region known as Central and Eastern Europe and between the region and the West The exchange of ideas between scholars in the East and West was facilitated by both personal and institutional relations both official and informal encounters For the longest time however intellectual exchange was thwarted by political tensions that led to large parts of Central and Eastern Europe being isolated from the West A few literary theories nevertheless made it into Western scholarly discourses via exiled scholars Some of these scholars such as Mikhail Bakhtin become widely known in the West and their thought was transposed onto new Western cultural contexts others such as Olga Freidenberg were barely noticed outside of Russian and Poland This volume draws attention to the schools circles and concepts that shaped the development of theory in Central and Eastern Europe as well as the histoire croise the history of translations transformations and migrations that conditioned its relationship with the West

Bayard,2012-05-08 Ever wondered why your ceiling is shaped like the arches in a gothic cathedral Or why your office building looks so different from its neighboring counterparts The ABC of Style invites you to explore the many different architectural and decorative interior styles from their ancient origins to the 1940s Take a journey through history to see how the French aristocracy styled their palaces and castles to the simple designs of the Dominican monastic churches during the middle ages Often political changes implicate a stylistic transformation Thus the different European styles were frequently named after a sovereign or a historical period Renaissance style Medieval style Until the end of the nineteenth century the stylistic mutations of the time were generally based on the tastes of the royalty Stylistic expression was therefore an affirmation of power Medieval Irish Architecture and the Concept of Romanesque Tadhg O'Keeffe,2024-02-28 This book presents a fresh perspective on eleventh and twelfth century Irish architecture and a critical assessment of the value of describing it and indeed contemporary European architecture in general as Romanesque Medieval Irish Architecture and the Concept of Romanesque is a new and original study of medieval architectural culture in Ireland The book's central premise is that the concept of a Romanesque style in eleventh and twelfth century architecture across Western Europe including Ireland is problematic and that the analysis of building traditions of that period is not well served by the assumption that there was a common style Detailed discussion of important buildings in Ireland a place marginalised within the Romanesque model reveals the Irish evidence to be intrinsically interesting to students of medieval European architecture for it is evidence which illuminates how architectural traditions of the Middle Ages were shaped by balancing native and imported needs and aesthetics often without reference to Romanitas This book is for specialists and students in the fields of Romanesque medieval archaeology medieval architectural history and medieval Irish studies The Theory of the Sublime from Longinus

The Concept of Freedom in Anthropology David Bidney,2020-05-18 No detailed description available for The Concept of Freedom in Anthropology **The Autopoiesis of Architecture, Volume II** Patrik Schumacher,2012-04-24 This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be

understood as its own distinct system of communication Autopoeisis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher s ideas focusing on architecture as an autopoeitic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty Architecture s specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded
