Work-Life Balance in Higher Education Bruce D. McDonald III, William Hatcher, 2022-09-05 This book explores the issue and struggle of work life balance in higher education It provides a rare opportunity to shape the conversation surrounding work life balance in academia and provide a venue for dialogue around balance that had previously been forced into secret The challenges that surround work life balance are something that we must all confront but they are also something that is rarely discussed within academia Faculty and graduate students face increasing demands to publish while also being expected to effectively teach and engage in service to both the university and the community The demands of an academic career have been cited as a reason for faculty and students to leave the academy but they have also been tied with rising rates of depression throughout the community Concerns about balance have led to challenges in recruiting diverse students and faculty for academic careers Each chapter explores how faculty and graduate students have sought and found balance The research included in this book is by leading scholars who discuss the challenge for academia to pay attention to the cultures and policies that may improve or hinder work life balance The chapters in this book were originally published as a special issue of Journal of Public Affairs Education

Internal Affairs K.L. Butler, 2013-11-11 This book is not written for posterity It is meant to constitute part of

my contribution to a continuing debate at the intersection of the philosophy of mind the philosophy of language epistemology and the philosophy of cognitive science The debate is over how mental states are individuated Many philosophers call them externalists or anti individualists believe that the individuation of mental states requires appeal to an individual s social and or physical environment I am not among them I am an internalist or individualist This book attempts to show that the leading proponents of externalism make a lot of mistakes in defending their view This is either because the view is false so any defense of it is bound to make some mistake or another or it is because the people defending externalism have not been very careful or both I have included some introductory material so that those not already familiar with the issues involved might nevertheless gain entry into the debate The intended audience however consists in those professional philosophers and students of philosophy who are already familiar with and interested in the question of how mental states are individuated I do not spend much time trying to motivate an interest in this issue Like all philosophy it is interesting and worthwhile if one is blessed or cursed with the appropriate kind of intellectual curiosity Those who do not meet this requirement proceed at their own risk

Bogdan,2014-01-02 Q Why do organisms need cognition A To get information about their environments Q Why such information A Because organisms need to guide their behaviors to goals Q Why guidance A Because it leads to goal satisfaction Q Why goals Cognition is a naturally selected response by genetic programs to the evolutionary pressure of guiding behaviors to goals Organisms are material systems that maintain and replicate themselves by engaging their world in goal directed ways This is how guidance of behavior to goal grounds and explains cognition and the main forms in which it manages information Guidance to goal also makes a difference to the understanding of human cognition Simpler forms of cognition evolve to handle fixed informational transactions with the world whereas human cognition evolves the abilities to script flexible goal situations that fit specific contexts of behavior This teleoevolutionary approach has important implications for cognitive science two of which are programmatic One is that information that guides to goal is not exclusively cognitive guidance is also affected by ecological facts and regularities as well as by design assumptions about them The other implication is that the functional analyses dominant in cognitive science and philosophy of mind are incomplete and weak They are incomplete in that they focus only on the explicitly encoded cognitive information and its behavioral consequences thus ignoring the larger guidance arrangements and weak because causal and functional relations implement but underdetermine goal directed and goal guided processes A work dealing expressly with the foundations of cognitive science this book addresses basic but seldom asked questions about the evolutionary rationale of cognition and the way this rationale has shaped the major types of cognition It also provides a teleological answer to these basic questions in terms of goal directedness and particularly guidance of behavior to goal In so doing the work defends the scientific respectability and the explanatory necessity of teleology by showing that goal directedness characterizes the work of genetic programs Mastering InDesign CS3 for
