## **The Dark Number:**

**Numbers in the Dark** Italo Calvino, 2013-04-04 Numbers in the Dark is a collection of short stories covering the length of Italo Calvino's extraordinary writing career from when he was a teenager to shortly before his death. They include witty allegories and wise fables: a town where everything has been forbidden apart from the game of tip cat; a pitiable tribe watching the flight paths of guided missiles from outside their mud huts; a computer programmer considering the possible sequence of a series of brutal acts and dialogues with Henry Ford, a Neanderthal, and the gloomy overthrown Montezuma. Italo Calvino, one of Italy's finest postwar writers, has delighted readers around the world with his deceptively simple fable-like stories. Calvino was born in Cuba in 1923 and raised in San Remo, Italy; he fought for the Italian Resistance from 1943-45. His major works include *Cosmicomics* (1968), *Invisible Cities* (1972), and *If on a winter's night a traveler* (1979). He died in Siena in 1985 of a brain hemorrhage.

Castro, 2025-09-02 Brings together geographies and methodologies often kept apart by the difficulties of researching such a broad ranging topic as the war Shots in the Dark offers cutting edge scholarship across different subfields in World War II history revealing new insights into how this crucial conflict was planned experienced and fought Twelve chapters demonstrate the broad scope of wartime innovation and how the war functioned as a global turning point driving change at all levels of human society from government institutions to individual identities Contributors collaborated in a vibrant workshops series sponsored by the North American branch of the Second World War Research Group SWWRGNA an organization that emerged to nurture scholarship on the global war and unite scholars fragmented in narrower regional and methodological stovepipes to consider the war as a whole The SWWRGNA and this volume showcase the work of diverse historians across subfields operational cultural gender social intelligence and diplomatic history This approach exposes the Second World War as a catalyst for overlapping global changes that revolutionized the world after 1945 These scholars reveal continuities and parallels in wartime experiences that would remain invisible in narrowly focused projects The volume establishes three frameworks for understanding and interpreting changes the war provoked 1 institutional adaptation 2 totalization or the militarization of civilians and 3 cultural transformation Each of the three frameworks is explored from four vantage points Geographies are deliberately contrasted within each framework to examine the broad scope of that level of war driven change **Evolution in the Dark** Horst Wilkens, Ulrike Strecker, 2017-05-25 This book provides fascinating insights into the development and genetics of evolutionary processes on the basis of animals living in the dark such as the Astyanax cave fish Biologically functionless traits show high variability which results from neutral deleterious mutations no longer being eliminated by natural selection which normally acts to preserve functional capability These negative mutations accumulate until the traits they are responsible for become rudimentary or even lost The random genetic basis of regressive evolution is in accordance with Nei s Neutral Theory of Molecular Evolution which applies to the molecular level Such

processes are particularly conspicuous in species living in constant darkness where for example in *Astyanax* all traits depending on the exposure to light like eyes pigmentation visually triggered aggressive behaviour negative phototaxis and several peripheral outcomes of circadian rhythmicity are useless and diminish In compensation constructive traits like taste olfaction or the lateral line senses are improved by selection and do not show variability Regressive and constructive traits inherit independently proving that the rudimentation process is not driven by pleiotropic linkage between them All these traits are subject to mosaic evolution and exhibit unproportional epistatic gene effects which play an important role in evolutionary adaptation and improvement Offering valuable evolutionary insights and supplemented by a wealth of illustrations this book will appeal to evolutionary and developmental biologists alike
