Rovee-Collier, Harlene Hayne, Michael Colombo, 2001-01-01 This is the only book that examines the theory and data on the development of implicit and explicit memory It first describes the characteristics of implicit and explicit memory including conscious recollection and tasks used with adults to measure them Next it reviews the brain mechanisms thought to underlie implicit and explicit memory and the studies with amnesics that initially prompted the search for different neuroanatomically based memory systems Two chapters review the Jacksonian first in last out principle and empirical evidence for the hierarchical appearance and dissolution of two memory systems in animal models rats nonhuman primates children and normal amnesic adults Two chapters examine memory tasks used with human infants and evidence of implicit and explicit memory during early infancy Three final chapters consider structural and processing accounts of adult memory dissociations their applicability to infant memory dissociations and implications of infant data for current concepts of implicit and explicit memory Series B

The Neural Bases of Higher Cognitive Development Adele Diamond, *A Dynamic Systems Approach to the Development of Cognition and Action* Esther Thelen, Linda B. Smith, 1994 A Dynamic Systems Approach to the Development of Cognition and Action presents a comprehensive and detailed theory of early human development based on the principles of dynamic systems theory Beginning with their own research in motor perceptual and cognitive development Thelen and Smith raise fundamental questions about prevailing assumptions in the field They propose a new theory of the development of cognition and action unifying recent advances in dynamic systems theory with current research in neuroscience and neural development In particular they show how by processes of exploration and selection multimodal experiences form the bases for self organizing perception action categories Thelen and Smith offer a radical alternative to current cognitive theory both in their emphasis on dynamic representation and in their focus on processes of change Among the first attempt to apply complexity theory to psychology they suggest reinterpretations of several classic issues in early cognitive development The book is divided into three sections The first discusses the nature of developmental processes in general terms the second covers dynamic principles in process and mechanism and the third looks at how a dynamic theory

can be applied to enduring puzzles of development Cognitive Psychology series **The Neurological Basis of Learning, Development and Discovery** Anton E. Lawson, 2006-04-11 A goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice For far too long educational practice has suffered because we have lacked firm instructional guidelines which in my view should be based on sound psychological theory which in turn should be based on sound neurological theory In other words teachers need to know how to teach and that how to teach should be based solidly on how people learn and how their brains function As you will see in this book my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas Idea generating involves analogies and testing requires comparing predicted consequences with actual consequences We learn this way because the brain is essentially an idea generating and testing machine But there is more to it than this The very process of generating and testing ideas results not only in the construction of ideas that work i e the learning of useful declarative knowledge but also in improved skill in learning i e the development of improved procedural knowledge **Cognitive Modeling** Thad A. Polk, Colleen M. Seifert, 2002 A comprehensive introduction to the computational modeling of human cognition **The Wiley-Blackwell Handbook of Infant Development, 2 Volume Set** J. Brainerd, Frank N. Dempster, 1995-02-08 Life scientists have long been familiar with the notion of interference and inhibition in biological systems 3 4 most notably in the neuron Now these concepts have been applied to cognitive psychology to explain processes in attention learning memory comprehension and reasoning Presenting an overview of research findings in this realm Interference and Inhibition in Cognition discusses what processes are sensitive to interference individual differences in interference sensitivity and how age and experience factor into one's ability to inhibit interference Provides empirical and theoretical perspectives Discusses how inhibition and interference change with age and experience Illustrates the ways in which interference affects language processing attention perception learning and memory **Using Developmental, Cognitive, and Neuroscience Approaches To Understand Executive Control in Young Children** Kimberly Andrew Espy, 2018-12-07 The seven articles in this special issue represent a sampling of the exciting findings that are beginning to

emerge from studies of executive control in young children They demonstrate the multidisciplinary approaches to study cognition in young children that include application of cognitive neuroscience and developmental paradigms in typically developing youngsters as well as those affected by clinical conditions such as traumatic brain injury exposure to low levels of lead in the environment and prematurity Although much work remains to be done these study results are illustrative of the dynamic work in this exciting development period Brain Development and Cognition Mark H. Development of Mental Representation Irving E. Sigel, 2013-06-17 There is a general and extensive literature in the development of representational thought and symbolic processes because of its centrality in human evolution However the umbrella of science and its method does not necessarily lead to a coherent conceptual model or agreements among scholars These basic differences among various disciplines have led to the creation of new and exciting realms of research This book considers how representational or symbolic thought develops for children's use in a wide array of these circumstances
