Abstract Literature review is an important but time-consuming task that involves many disparate steps. A simple query to a library database may return voluminous literature that often bewilders novices. We believe the bibliographic techniques developed by the information scientists provide useful process and methods that facilitate literature analysis and review. We thereby developed a citation-based literature analyzing and structuring system, which may facilitate novices to perform tasks that are usually carried out by trained professionals. A field study was carried out to gauge the utility as well as users' perception using a questionnaire adopted from relevant empirical studies. Graduate students participated in the field study are able to publish papers in their first semester by utilizing this system. The utility and usefulness of the intellectual structuring system are demonstrated by the objective evidence of the high acceptance rate of papers utilizing the system as well as the subjective positive response from the users. A system utilization model utilizing the structure equation modeling technique found the task characteristics construct affects the information quality construct, which in turn affects the perceive usefulness of the system.

Introduction

Literature review is an important and fundamental work that is essential to any research study. A good literature review summarizes the current state of a designated research field, and serves as a cornerstone upon which an incremental study may carry out to augment the present knowledge state. However, literature review is a time-consuming endeavor which encompasses many disparate activities. It usually starts with an initial literature search, and followed by content review and analysis. The reviewed and analyzed materials from

Greentech Innovation and Diffusion Philipp Hoff, 2012-03-05 The world is going green Sustainable technologies such as renewable energy and electric vehicles are increasingly becoming part of our daily life This dissertation fills the ensuing gap by providing an insight into the emerging German greentech industry one of the largest in the world It develops an integrated and interdisciplinary theoretical framework in which to assess the relationships between innovation growth and financing from a firm level perspective it then tests this framework empirically In essence the study finds that 1 Innovative activity and corporate growth depend heavily on the availability of capital At the same time it appears that particularly innovative firms are more likely to face financial constraints 2 A lack of funds is very apparent for around a quarter of the

firms investigated and seems most severe in the early part of the growth state where firms focus on commercializing existing products 3 Government support programs only partially offset these effects
