## **The Dissociative Child Diagnosis Treatment And Management:**

The Dissociative Child Joyanna L. Silberg, 1996      *Dissociation in Traumatized Children and Adolescents* Sandra Wieland, 2015-03-27

*Dissociation in Traumatized Children and Adolescents* presents a series of unique and compelling case studies written by some of the foremost international experts in the study of dissociation in young people. In the new edition, chapters have been updated to include discussion of the most recent findings in trauma and neuroscience as well as Joyanna Silberg's popular affect avoidance model. In addition, Sandra Wieland's incisive commentaries on each case study have been updated. Each chapter presents a detailed narrative of a therapist's work with a child or adolescent interspersed with the therapist's own thought process, and every therapist explains the theory and research behind her clinical decisions. The case studies present many aspects of working with traumatized children: attachment work, trauma processing, work with the family, interactions with the community, psychoeducation related to dissociation, and encouragement of communication between the dissociated parts, and provide a frank analysis of the difficulties clinicians encounter in various therapeutic situations. While the book is exceptional in its clear and detailed descriptions of theory related to dissociation in children, most importantly, it illustrates how theory can be translated into successful therapeutic interactions.

Encyclopedia of Adolescence Roger J.R. Levesque, 2014-07-08

The *Encyclopedia of Adolescence* breaks new ground as an important central resource for the study of adolescence. Comprehensive in breadth and textbook in depth, the *Encyclopedia of Adolescence* with entries presented in easy-to-access A to Z format serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer's print and online flexibility, the *Encyclopedia* is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the *Encyclopedia* draws from four major areas of research relating to adolescence. The first broad area includes research relating to Self Identity and Development in Adolescence. This area covers research relating to identity from early adolescence through emerging adulthood, basic aspects of development, e.g., biological, cognitive, social, and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on Adolescents' Social and Personal Relationships. This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual, and romantic, as well as significant nonparental adults. The third area examines Adolescents in Social Institutions. This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. Adolescent Mental Health constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health from

psychopathology to thriving Major topic examples include deviance violence crime pathology DSM normalcy risk victimization disabilities flow and positive youth development
