The History Psychology And Pedagogy Of Geographic Literacy:

The History, Psychology, and Pedagogy of Geographic Literacy Malcolm P. Douglass, 1999-10-30 Combines historical psychological and pedagogical concepts into a unified whole where the concern is with the enhancement of geographic literacy Copyright Libri GmbH All rights reserved *The Geographic Revolution in Early America* Martin

Brückner, 2012-12-01 The rapid rise in popularity of maps and geography handbooks in the eighteenth century ushered in a new geographic literacy among nonelite Americans In a pathbreaking and richly illustrated examination of this transformation Martin Brückner argues that geographic literacy as it was played out in popular literary genres written for example by William Byrd George Washington Thomas Jefferson Royall Tyler Charles Brockden Brown Meriwether Lewis and William Clark significantly influenced the formation of identity in America from the 1680s to the 1820s Drawing on historical geography cartography literary history and material culture Brückner recovers a vibrant culture of geography consisting of property plats and surveying manuals decorative wall maps and school geographies the nation's first atlases and sentimental objects such as needlework samplers By showing how this geographic revolution affected the production of literature Brückner demonstrates that the internalization of geography as a kind of language helped shape the literary construction of the modern American subject Empirically rich and provocative in its readings *The Geographic Revolution in Early America* proposes a new geographical basis for Anglo Americans understanding of their character and its expression in pedagogical and literary terms **The Social Life of Maps in America, 1750-1860** Martin Brückner, 2017-10-26 In the age of

MapQuest and GPS we take cartographic literacy for granted We should not the ability to find meaning in maps is the fruit of a long process of exposure and instruction A cartocoded America a nation in which maps are pervasive and meaningful had to be created *The Social Life of Maps* tracks American cartography's spectacular rise to its unprecedented cultural influence Between 1750 and 1860 maps did more than communicate geographic information and political pretensions They became affordable and intelligible to ordinary American men and women looking for their place in the world School maps quickly entered classrooms where they shaped reading and other cognitive exercises giant maps drew attention in public spaces miniature maps helped Americans chart personal experiences In short maps were uniquely social objects whose visual and material expressions affected commercial practices and graphic arts theatrical performances and the communication of emotions This lavishly illustrated study follows popular maps from their points of creation to shops and galleries schoolrooms and coat pockets parlors and bookbindings Between the decades leading up to the Revolutionary War and the Civil War early Americans bonded with maps Martin Brückner's comprehensive history of quotidian cartographic encounters is the first to show us how All the Facts James W. Cortada, 2016-03-16 *All the Facts* presents a history of the role of information in the United States since 1870 when the nation began a nearly 150 year period of economic prosperity and technological and scientific transformations James Cortada argues that citizens and their institutions used information extensively as tools to

augment their work and private lives and that they used facts to help shape how the nation evolved during these fourteen decades He argues that information's role has long been a critical component of the work play culture and values of this nation and no more so than during the twentieth century when its function in society expanded dramatically While elements of this story have been examined by thousands of scholars such as the role of radio newspapers books computers and the Internet about such institutions as education big business expanded roles of governments from town administration to the state house from agriculture to the services and information industries All the Facts looks at all of these elements holistically providing a deeper insight into the way the United States evolved over time An introduction and 11 chapters describe what this information ecosystem looked like how it evolved and how it was used For another vast layer of information about this subject the reader is directed to the detailed bibliographic essay in the back of this book It includes a narrative history case studies in the form of sidebars and stories illustrating key points Readers will find for example the story of how the US postal system helped create today's information society along with everything from books and newspapers to TV computers and the Internet The build up to what many today call the Information Age took a long time to achieve and continues to build momentum The implications for the world and not just for the United States are as profound as any mega trend one could identify in the history of humankind All the Facts presents this development thoroughly in an easy to digest format that any lover of history technology or the history of information and business will enjoy

Reflections on People, Policy, and Practices in Curriculum History Deborah L. Morowski, Lynn M. Burlbaw, 2024-03-01 America's schools are constantly in the news today for safety concerns contested curricula teacher quality test scores and a variety of other topics Although most people spend at least 12 years in school systems they know little of the history or evolution of American schooling The collection of papers assembled in this book are divided into three categories which greatly impacted American schooling people policy and practices This work seeks to shed light on what has occurred in curriculum history in the past so as to help readers develop a deeper understanding of how our system of schooling arrived at its current state The first section of the book examines the stories of people who had an influence on schooling and education The second section focuses on the curricula and programs that were utilized in schools and districts throughout the country The final chapter of the book looks at decisions that had long ranging impact on educational policies The chapters of this book offer a glimpse into the history of American schooling and those people policies and practices that influenced its development It is the editors hope that the work will spark interest in scholars and students of educational history to examine other past as well as present stories of educators to expand our understanding of the saga that is the American schooling experience

The Power of Projections Arthur Jay Klinghoffer, 2006-04-30 Why is Europe at the top half of maps and Africa at the bottom Although we are accustomed to that convention it is in fact a politically motivated almost entirely subjective way of depicting a ball spinning in space As The Power of Projections teaches us maps do not portray reality only interpretations of it To begin with they are two

dimensional projections of a three dimensional spherical Earth Add to that the fact that every map is made for a purpose and its design tends to reflect that purpose Finally a map is often a psychological projection of the historical political and cultural values of the cartographer or of the nation person or organization for which the map was created In this fascinating book Klinghoffer examines the world perceptions of various civilizations and the ways in which maps have been formulated to serve the agendas of cartographers and their patrons He analyzes the recent decline of sovereignty the spread of globalization the reassertion of ethnic identity and how these trends affect contemporary mapmaking
