The Last Neanderthal The Rise Success And Mysterious Extinction Of Our Closest Human Relatives:

The Last Neanderthal Ian Tattersall,1995-01-01 Examines the scientific evidence of Neanderthal man describing the way he lived and exploring how and why he may have become extinct **Literary Darwinism** Joseph Carroll,2004 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company **Earth** Frank H. T. Rhodes,2012-06-10 It is impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It s a survival issue This is the only planet we have We re stuck here and we don t own the place it would be the height of arrogance to assume that we do We re tenants here not owners but we re tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant s Manual In *Earth A Tenant s Manual* the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth s livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth s exploding population He concludes with an extended exploration of humanity s prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth s processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home *Evolution in an Anthropological View* C. Loring Brace,2000 Brace has reworked ten of the many articles he has published on human evolution over the past 40 years and assembled them into a statement on evolutionary anthropology He begins by investigating which anthropological data can benefit from an evolutionary perspective and which cannot Then he explores such topics as Darwinism race cladistics phylogeny Neanderthals dentition and cultural ecology Annotation copyrighted by Book News Inc Portland OR **Life Without Oil** Steve Hallett,John Wright,2011-03-14 By the end of the 21st century our oil and natural gas supplies will be virtually nonexistent and limited coal supplies will be restricted to only a handful of countries The authors an environmental scientist and veteran journalist make abundantly clear that we must plan for a future without reliance on oil They make a compelling case that the key determinant of our global economy is not so much the invisible hand of the marketplace but the

inexorable laws of ecology Although the coming decades will be a time of much disruption and change of lifestyle in the end we may learn a wiser more sustainable stewardship of our natural resources This timely sobering yet constructive discussion of energy and ecology offers a realistic vision of the near future and many important lessons about the limits of our resources

Becoming Human Ian Tattersall,1999 Explores the evolution of humankind who we are where we came from and where we are going *Civilizations Beyond Earth* Douglas A. Vakoch,Albert A. Harrison,2011-09-01 Astronomers around the world are pointing their telescopes toward the heavens searching for signs of intelligent life If they make contact with an advanced alien civilization how will humankind respond In thinking about first contact the contributors to this volume present new empirical and theoretical research on the societal dimensions of the Search for Extraterrestrial Intelligence SETI Archaeologists and astronomers explore the likelihood that extraterrestrial intelligence exists using scientific insights to estimate such elusive factors as the longevity of technological societies Sociologists present the latest findings of novel surveys tapping into the public s attitudes about life beyond Earth to show how religion and education influence beliefs about extraterrestrials Scholars from such diverse disciplines as mathematics chemistry journalism and religious studies offer innovative solutions for bridging the cultural gap between human and extraterrestrial civilizations while recognizing the tremendous challenges of communicating at interstellar distances At a time when new planets are being discovered around other stars at an unprecedented rate this collection provides a much needed guide to the human impact of discovering we are not alone in the universe **Cryptozoology A To Z** Loren Coleman,Jerome Clark,2013-05-07 The ultimate quest for the

world s most mysterious creatures The Loch Ness Monster Bigfoot the Abominable Snowman these are the names of the elusive beasts that have caught the eye and captured the imaginations of people around the world for centuries Recently tales of these monsters have been corroborated by an increase in sightings and out of these legends a new science has been born cryptozoology the study of hidden animals Cryptozoology A to Z the first encyclopedia of its kind contains nearly two hundred entries including cryptids the name given to these unusual beasts new animal finds and the explorers and scientists who search for them Loren Coleman one of the world s leading cryptozoologists teams up with Jerome Clark editor and author of several encyclopedias to provide these definitive descriptions and many never before published drawings and photographs from eyewitnesses detailed accounts Full of insights into the methods of these scientists exciting tales of discovery and the history and evolution of this field Cryptozoology A to Z is the most complete reference ever of the newest zoological science **Losing Our Heads** Regina Janes,2005-08 What is the fascination that decollation holds for us as

individuals and as a culture Why does the idea make us laugh and the act make us close our eyes Losing Our Heads explores in both artistic and cultural contexts the role of the chopped off head It asks why the practice of decapitation was once so widespread why it has diminished but not as scenes from contemporary Iraq show completely disappeared and why we find it

so peculiarly repulsive that we use it as a principal marker to separate ourselves from a more barbaric or primitive past Although the topic is grim Regina Janes s treatment and conclusions are neither grisly nor gruesome but continuously instructive about the ironies of humanity s cultural nature Bringing to bear an array of evidence the book argues that the human ability to create meaning from the body motivates the practice of decapitation its diminution the impossibility of its extirpation and its continuing fascination Ranging from antiquity to the late nineteenth century passion for Salom and John the Baptist and from the enlightenment to postcolonial Africa s challenge to the severed head as sign of barbarism Losing Our Heads opens new areas of investigation enabling readers to understand the shock of decapitation and to see the value in moving past shock to analysis Written with penetrating wit and featuring striking illustrations it is sure to captivate anyone interested in his or her head

The Tangled Wing Melvin Konner,2003-02 A vital updating of a seminal work of science First published to great acclaim twenty years ago *The Tangled Wing* has become required reading for anyone interested in the biological roots of human behavior Since then revolutions have taken place in genetics molecular biology and neuroscience All of these innovations have been brought into account in this greatly expanded edition of a book originally called an overwhelming achievement by The Times Literary Supplement A masterful synthesis of biology psychology anthropology and philosophy *The Tangled Wing* reveals human identity and activity to be an intricately woven fabric of innumerable factors Melvin Konner s sensitive and straightforward discussion ranges across topics such as the roots of aggression the basis of attachment and desire the differences between the sexes and the foundations of mental illness

The Power of Plagues Irwin W. Sherman,2020-07-02 *The Power of Plagues* presents a rogues gallery of epidemic causing microorganisms placed in the context of world history Author Irwin W Sherman introduces the microbes that caused these epidemics and the people who sought and still seek to understand how diseases and epidemics are managed What makes this book especially fascinating are the many threads that Sherman weaves together as he explains how plagues past and present have shaped the outcome of wars and altered the course of medicine religion education feudalism and science Cholera gave birth to the field of epidemiology The bubonic plague epidemic that began in 1346 led to the formation of universities in cities far from the major centers of learning and hot spots of the Black Death at that time And the Anopheles mosquito and malaria aided General George Washington during the American Revolution Sadly when microbes have inflicted death and suffering people have sometimes responded by invoking discrimination scapegoating and quarantine often unfairly against races or classes of people presumed to be the cause of the epidemic Pathogens are not the only stars of this book Many scientists and physicians who toiled to understand treat and prevent these plagues are also featured Sherman tells engaging tales of the development of vaccines anesthesia antiseptics and antibiotics This arsenal has dramatically reduced the suffering and death caused by infectious diseases but these plague protectors are imperfect due to their side effects or attenuation and because microbes almost invariably develop resistance to antimicrobial drugs *The Power of Plagues* provides a sobering reminder that

plagues are not a thing of the past Along with the persistence of tuberculosis malaria river blindness and AIDS emerging and remerging epidemics continue to confound global and national public health efforts West Nile virus Lyme disease and Ebola and Zika viruses are just some of the newest rogues to plague humans The argument that civilization has been shaped to a significant degree by the power of plagues is compelling and The Power of Plagues makes the case in an engaging and informative way that will be satisfying to scientists and non scientists alike

A Short History of Progress Ronald Wright,2004-10-23 Each time history repeats itself so it s said the price goes up The twentieth century was a time of runaway growth in human population consumption and technology placing a colossal load on all natural systems especially earth air and water the very elements of life The most urgent questions of the twenty first century are where will this growth lead can it be consolidated or sustained and what kind of world is our present bequeathing to our future In his 1 bestseller A Short History of Progress Ronald Wright argues that our modern predicament is as old as civilization a 10 000 year experiment we have participated in but seldom controlled Only by understanding the patterns of triumph and disaster that humanity has repeated around the world since the Stone Age can we recognize the experiment s inherent dangers and with luck and wisdom shape its outcome
