the top down approach to consciousness written with Sommerhoff's characteristic clarity and precision It says far more than
other books four times the size of this admirably concise volume This book is destined to become a pillar of the subject
Rodney Cotterill Technical University of Denmark The problem of consciousness has been described as a mystery about
which we are still in a terrible muddle and in *Understanding Consciousness Its Function and Brain Processes* the author
unravels this mystery through a clarification of the main concepts related to consciousness followed by a comprehensive
biological explanation Consequently this book will be ideal for a wide range of upper level undergraduate and postgraduate

courses The author interprets consciousness as a property that can also be possessed by creatures lacking a language faculty and comprises all of the following awareness of the surrounding world awareness of the self as an entity and awareness of such things as thoughts and feelings He argues that a biological approach can achieve both the necessary conceptual clarifications and a joint explanation of these divisions of awareness in terms of just two accurately defined concepts of internal representation and two empirically supported assumptions about the functional architecture of a specific set of brain processes Despite this striking simplicity his model covers these divisions of awareness both as objective faculties of the brain and as subjective experience These conclusions are applied to a broad range of fundamental questions including the biological rationale of subjective experience and where consciousness resides in the neural networks Consciousness as a Scientific Concept Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences The Subject of Consciousness C. O. Evans, 2014-03-18 First published in 2002 This is Volume VI of seventeen in the Philosophy of Mind and Psychology series Written in 1970 this work is an exercise in constructive philosophy looking at the subject of consciousness and a theory offered as an explanation of self awareness *Vagueness and the Evolution of Consciousness* Michael Tye, 2021 The two dominant theories of consciousness argue it appeared in living beings either suddenly or gradually Both theories face problems The solution is the realization that a foundational consciousness was always here yet varying conscious states were not and appeared gradually Michael Tye explores this idea and the key questions it raises *The Concept of Consciousness* Edwin B. The Bloomsbury Companion to the Philosophy of Consciousness Dale Jacquette, 2018-01-25 From Descartes and Cartesian mind body dualism in the 17th century through to 21st century concerns about artificial intelligence programming. The Bloomsbury Companion to the Philosophy of Consciousness presents a compelling history and up to date overview of this burgeoning subject area. Acknowledging that many of the original concepts of consciousness studies are found in writings of past thinkers it begins with introductory overviews to the thought of Descartes through to Kant covering Brentano's restoration of empiricism to philosophical psychology and the major figures of the late 19th and early 20th centuries Russell Wittgenstein Ryle and James. These opening chapters on the forces in the history of consciousness lay the groundwork needed to understand how influential contemporary thinkers in the philosophy of mind interpret the concept of consciousness. Featuring leading figures in the field Part II discusses current issues in a range of topics progressing from the so called hard problem of understanding the nature of consciousness to the methodology of invoking the possibility of philosophical zombies and the prospects of reductivism in philosophy of mind. Part III is dedicated to new research directions in the philosophy of consciousness including chapters on experiment objections to functionalism and the scope and limits of artificial intelligence. Equipped with practical research resources including an annotated bibliography a research guide and a glossary. The Bloomsbury Companion to the Philosophy of Consciousness is an authoritative guide for studying the past present and future of consciousness.

The Meaning of Consciousness Andrew Lohrey, 1997 Advances a bold new theory of consciousness and meaning by means of subjective holistic analysis.

[Unifying Consciousness with the Universe](#) Brian A. Wenk, 2004-02-01 If one truly aspires to be a great artist or writer all dimensions of the heart mind and spirit must be thoroughly explored. Bravely and fearfully you must examine deep personal areas of your psyche which can be beautiful but at the same time frightening. All feelings derived from your existence must be embraced such as pain sorrow hope fear and love. Tony Bronk exposes his naked soul using art and prose as his vehicle. All human emotions are expressed vividly and

without compromise He s willing to go out on a limb precarious and dangerous as that may be He knows that if you dare to go out on that limb artistically that s where the fruit is found Denny Borski Stevens Point Wisconsin
