Resources in Education ,1980-10 Locating the Kingdom of God Karen J. Wenell,2024-08-22 This book offers a new multidisciplinary way of thinking about the Kingdom of God which fully recognises its sociological and spatial significance in performing boundaries of the sacred Though spatial critical perspectives have been increasingly recognised as important across many disciplines the significance of non physical religious spaces and their correspondence to boundaries of the sacred has not been explored fully and never using the specific example of the Kingdom of God Wenell considers the diverse and sometimes contradictory articulation of the Kingdom in the gospels as well as the ways that Kingdom language frames contemporary ethical debates Her study of the Kingdom is located within the wider study of religion affording the opportunity to investigate connections between space belonging and the sacred Wenell structures her investigation in four key areas that engage with the Kingdom in different but theoretically interconnected ways She begins by setting out a theory of sacred space that is capable of including the Kingdom and establishing key concepts such as boundary performance physical non physical spatiality spokespersons and controversy Wenell then focuses on the synoptic gospels and the origins of the Kingdom noting aspects of uncertainty as well as areas of agreement and controversy over boundaries of the sacred in these uniquely interrelated texts The third and fourth areas of investigation move into cultural reception considering instances where the Kingdom is formative for identity and ethical relationships both in individual and wider group belonging terms Specific reference is made to issues of ethical consuming and displacement placing the Kingdom in dialogue with Bauman s discussion of a society of consumers and Arendt s notion of equitable co habitation of the earth **Lectures In The Microeconomics Of Choice: Foundations, Consumers, And Producers** William David Anthony Bryant,2023-02-17 People pursue their own interests whatever those interests might be Some people have interests that are narrow and selfish while others have interests that are broad and altruistic The idea that people are self interested underpins all of economic analysis and raises two fundamental questions 1 How do people choose the actions they think will further their own interests 2 Can the potentially conflicting interests of different people be made to mesh in some sort of socio economic equilibrium This book is devoted to a detailed study of the first question Its Companion Volume Economy Wide Microeconomics Equilibrium Optimality Applications and Tests makes a detailed study of the second question Following some foundational remarks this book studies the Arrow Debreu theory of consumer choice That theory supposes people choose so as to maximize a complete continuous transitive and reflexive binary preference relation over a non empty and compact choice set The book then studies numerous refinements generalizations and extensions of each of these restrictions up to and including recent work on Behavioral theories of choice and choice behaviour when preferences are intransitive incomplete

discontinuous Also considered is choice behaviour in environments that are not necessarily compact A study is also made of intertemporal choice and choice under uncertainty The study of Arrow Debreu choice theory and its extensions are presented from the Primal Dual and Revealed Preference points of view Consumers are not the only agents in the economy as Producers are present as well Beginning with a study of the Arrow Debreu idea that producers choose from a convex production set so as to maximize profit the book considers extensions and generalizations of this framework particularly to non convex environments The study is presented from the Primal and Dual points of view The final chapter in the book provides a link to its Companion Volume The Chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above Resources are available to instructors who adopt this book More details at www.worldscientific.com/worldscibooks/10.1142/12789 sm **Getting it Wrong** William A.

Barnett,2011-12-16 A leading economist contends that the recent financial crisis was caused not by the failure of mainstream economics but by corrupted monetary data constructed without reference to economics Blame for the recent financial crisis and subsequent recession has commonly been assigned to everyone from Wall Street firms to individual homeowners It has been widely argued that the crisis and recession were caused by greed and the failure of mainstream economics In *Getting It Wrong* leading economist William Barnett argues instead that there was too little use of the relevant economics especially from the literature on economic measurement Barnett contends that as financial instruments became more complex the simple sum monetary aggregation formulas used by central banks including the U S Federal Reserve became obsolete Instead a major increase in public availability of best practice data was needed Households firms and governments lacking the requisite information incorrectly assessed systemic risk and significantly increased their leverage and risk taking activities Better financial data Barnett argues could have signaled the misperceptions and prevented the erroneous systemic risk assessments When extensive best practice information is not available from the central bank increased regulation can constrain the adverse consequences of ill informed decisions Instead there was deregulation The result Barnett argues was a worst case toxic mix increasing complexity of financial instruments inadequate and poor quality data and declining regulation Following his accessible narrative of the deep causes of the crisis and the long history of private and public errors Barnett provides technical appendixes containing the mathematical analysis supporting his arguments [Hearings on](#)
