The Human Side Of Information Processing

Jacques Berleur, Chrisanthi Avgerou

The Human Side Of Information Processing:

The Human Side of Knowledge Management Pamela S. Mayer, Center for Creative Leadership, 2000 The technology behind knowledge management is familiar to many managers but the human side of knowledge management is less familiar For example how do motivation and learning affect the individual s acquisition and transfer of knowledge and how do group dynamics mediate the role of knowledge in an organization This book reviews the literature that addresses the human side of knowledge acquisition transfer and application The author presents these annotations and a view of knowledge management that provides support for leaders who must capture the information available within their organizations to make sense of and confront familiar and unprecedented challenges during a time of rapid change

The Human Side of Service Engineering Christine Leitner, Rainer Nägele, Clara Bassano, Debra Satterfield, 2024-07-24 Proceedings of the 15th International Conference on Applied Human Factors and Ergonomics and the Affiliated Conferences Nice France 24-27 July 2024

Perspectives and Policies on ICT in Society Jacques Berleur, Chrisanthi Avgerou, 2006-01-20 Governments the media the information technology industry and scientists publicly argue that information and communication technologies ICT will bring about an inevitable transition from industrial to information or knowledge based economies and societies It is assumed that all aspects of our economic and social lives in both the public and private spheres will be radically different from what they are today The World Summit on the Information Society Geneva 2003 Tunis 2005 shows the importance of a worldwide reflection on those topics Perspectives and Policies on ICT in Society explores the ICT policies of different nations and regions such as Africa China Europe and India The authors assess the arguments surrounding the impending new age as well as some of the more sensitive issues of its developments This progress will signal an expansion of ICT in many domains the so called ubiquity such as in the workplace the home government and education and it will affect privacy and professional ethics The expansion will also encompass all parts of the earth particularly developing countries Such growth must take place in the context of historical dimensions and should underscore the accountability of professionals in the field The intent of this book is to address these issues and to serve as a handbook of IFIP s TC9 Computers and Society committee Thirty authors from twelve countries consider the ICT policies with their associated perspectives and they explore what may be the information age and the digital society of tomorrow The book provides reflection on today s complex society and addresses the uncertain developments rising from an increasingly global and technologically connected world Jacques Berleur is at the University of Namur Belgium and Chrisanthi Avgerou at the London School of Economics United Kingdom

Shappell, 2017-12-22 Human error is implicated in nearly all aviation accidents yet most investigation and prevention programs are not designed around any theoretical framework of human error Appropriate for all levels of expertise the book provides the knowledge and tools required to conduct a human error analysis of accidents regardless of operational setting i

Guidelines for Preventing Human Error in Process Safety CCPS (Center for Chemical Process Safety), 2010-08-13 Almost all the major accident investigations Texas City Piper Alpha the Phillips 66 explosion Feyzin Mexico City show human error as the principal cause either in design operations maintenance or the management of safety This book provides practical advice that can substantially reduce human error at all levels In eight chapters packed with case studies and examples of simple and advanced techniques for new and existing systems the book challenges the assumption that human error is unavoidable Instead it suggests a systems perspective This view sees error as a consequence of a mismatch between human capabilities and demands and inappropriate organizational culture This makes error a manageable factor and therefore avoidable
