ICICKM 2019 16th International Conference on Intellectual Capital Knowledge Management & Organisational Learning
John Dumay, James Guthrie, Rahat Munir, 2019-12-05 **Services and the Knowledge-Based Economy** Mark Boden, Ian Miles, 2019-07-23 First published in 2000 Over the past two decades the service sector have increased dramatically and now

occupy the largest share of the economy of advanced industrial societies. Certain business services are regularly cited as evidence for the emergence of a knowledge economy. In this pioneering book, leading researchers in the fields of service industries and innovation studies investigate the reasons for the growth of the service sectors and this emergent knowledge economy. Drawing on material as diverse as macroeconomic statistics and firm level case studies, the contributors demonstrate that services are often important innovators in their own right as well as contributing to innovation and economic performance in their user industries. The question of how far services are special cases and what specific processes and trajectories characterize their innovative activity is treated systematically. Additionally, a variety of original analyses and information resources are presented. This book should be of value to the student of the modern industrial society, to those seeking to forge policies appropriate to the new context of economic development and to researchers who are confronting the challenges of the knowledge economy.

National Strategies to Harness Information Technology Nagy K. Hanna, Peter T. Knight, 2011-12-10

The ability to harness Information Communication Technologies (ICTs) is increasingly at the heart of competitiveness and sustainable growth. As countries engage in an increasingly competitive global economy, they are trying to weave ICT into their development strategies in the same way enterprises have learned to use ICT to transform their business models and strategies. This integration offers a new path to development that is responsive to the challenges of our times. In *National Strategies to Harness Information Technology*, Nagy Hanna and Peter Knight provide a framework for assessing the opportunities, challenges, and prospects for e transformation and for analyzing the options and innovations adopted to manage the e transformation process. They ask hard questions: what does it take to harness ICT to transform an economy? Why do some countries accelerate their development journey with ICT while others fail? How did successful countries balance the need for strategic leadership with bottom up innovation? Can countries reduce the risks of digital divide? What have been the roles of government and private sectors? What lessons can be learned for countries at different levels of development?

Featuring contributions from country experts, the editors and authors provide in depth case studies of ICT deployment in Singapore, Finland, the Philippines, and South Africa and assess the progress of such efforts. The result is an essential resource for academic researchers, policy analysts, policymakers, and industry leaders interested in the role of ICT in national development, innovation, and economic growth.
