Newton's Mathematical Principles of Natural Philosophy and His System of the World Isaac Newton, 1962-01-01 I consider philosophy rather than arts and write not concerning manual but natural powers and consider chiefly those things which relate to gravity levity elastic force the resistance of fluids and the like forces whether attractive or impulsive and therefore I offer this work as the mathematical principles of philosophy In the third book I give an example of this in the explication of the System of the World I derive from celestial phenomena the forces of gravity with which bodies tend to the sun and other planets The Principia Isaac Newton, I. Bernard Cohen, 1999 Presents Newton's unifying idea of gravitation and explains how he converted physics from a science of explanation into a general mathematical system The
