PHYSICAL GEOGRAPHY (Geomorphology) Dr. Sarvjeet Singh, Dr. Tajinder Kour, 2019-10-12 Geography is the study of Earth's landscapes, people's places and environments. It is quite simply about the world in which we live. Geography is unique in bridging the social sciences (human geography) with the natural sciences (physical geography). Human geography concerns the understanding of the dynamics of cultures, societies and economies and physical geography concerns the understanding of the dynamics of physical landscapes and the environment. Geography puts this understanding of social and physical processes within the context of places and regions, recognizing the great differences in cultures, political systems, economies, landscapes and environments across the world and the links between them.

Barrier Technologies for Environmental Management National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Remediation of Buried and Tank Wastes, 1997-04-07 To control the migration of radioactive and hazardous wastes currently contained underground, barriers made of natural materials and man-made substances are constructed atop and possibly around the contaminated area.
