Clinical Guide to Heart Transplantation Jon Kobashigawa, 2025-10-02 This extensively revised textbook is a concise reference for those involved in the management of heart transplant. While this compilation of best practices cannot address the complexity of the individual patients we care for on a daily basis, it will serve to help us ask the right questions, access the best evidence, and ultimately make the best decisions for the patients involved. *Clinical Guide to Heart Transplantation* provides a current review of the field of heart transplantation and how it has evolved into an established therapy for the treatment of end stage heart failure. With the advent of improved surgical techniques, the development of immunosuppressive drugs, and the utilization of more sophisticated monitoring strategies and treatments for graft rejection, heart transplantation now offers patients an avenue to both improved survival and quality of life. With over 4000 heart transplants performed per year globally and with 1 year survival approaching 90%, this practical title is a vital reference to those involved in this most complex of procedures to establish best practice. It is therefore essential reading for all practitioners in this field who are charged with making critical decisions in the management of patients, donor organs, and the transplant process itself to achieve the greatest benefit in the utilization of this often scarce resource.

Clinical Handbook of Psychological Consultation in Pediatric Medical Settings Bryan D. Carter, Kristin A. Kullgren, 2020-03-20 This handbook examines pediatric consultation liaison psychology in pediatric medical settings. It offers a brief history of pediatric psychologists' delivery of consultation liaison services. The handbook provides an overview of roles, models, and configurations of pediatric psychology practice in diverse inpatient and outpatient medical settings. Chapters discuss the most frequently seen major pediatric conditions encountered in consultation practice. Coverage includes evaluation, intervention, and treatment of each condition. Each clinical condition addresses the referral problem in the context of history and family dynamics. In addition, chapters address important aspects of the management of a consultation liaison service and provide contextual issues in delivering evidence-based services in hospital and medical settings. Topics featured in this handbook include: The role of assessment in the often fast-paced medical environment; Modifications of approaches in the context of disorders of development; Consultation on pediatric gender identity; The presentation of child maltreatment in healthcare settings; The use of technological innovations in pediatric psychological consultation; Important ethical considerations in consultation liaison practice. *Clinical Handbook of Psychological Consultation in Pediatric Medical Settings* is a must-have resource for clinicians and related professionals as well as researchers, professors, and graduate students in pediatric and clinical child and adolescent psychology, pediatrics, social work, developmental psychology, child and adolescent psychiatry, and related disciplines.

Manual of Vascular Access, Organ Donation, and Transplantation A.J. Henriksen, R.L. Simmons, M.E. Finch, N.L. Ascher, J.S. Najarian, 2012-12-06 This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation pro gram at the University of Minnesota Descriptions of these techniques are not available at a single source elsewhere Use the book as a teaching aid a source of workable techniques and as a reference for individuals with relatively little experience in a particular area of transplantation Because of the varying levels of expertise of our readers vascular access is described in exquisite detail as it is aimed at an

audience of individuals who want to learn the fine points about how to prolong the function of shunts The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch even the catalogue numbers of the necessary equipment are included In contrast the chapters on heart liver and pancreas transplantation while omitting fine points of suture technique concentrate on the essential principles and safeguards Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique The chapters on cadaver organ donation are perhaps the most innovative They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation We hope that the book will become available to centers that while not performing liver pancreas or heart transplants wish to serve as donation centers
