## Books

**The Hepatic Coma Syndromes and Lactulose** By H O Conn and M M Lieberthal. (Pp. 419. Illustrated. \$46.00). Williams and Wilkins: Baltimore, 1979. This is an up-to-date and encyclopaedic account of hepatic encephalopathy and its treatment. Despite the wealth of detail the book is easy to read as it is well illustrated and the prose is punctuated with the witticisms one has come to expect from these authors.

There are detailed descriptions of the clinical and laboratory features of hepatic encephalopathy, including interesting observations on the nature of asterix and foetor hepaticus. Clinically detectable encephalopathy is clearly only the tip of the iceberg and there is an excellent chapter on the development and use of psychometric testing. The biochemical abnormalities purporting to be responsible for coma are well set out and dis-

cussed and it is interesting to see that ammonia is again rated highly after some years of relative obscurity. Chapters on the inherited hyperammonaemic states and Reye's syndrome are included for completeness.

The second half of the book is devoted to the management of hepatic encephalopathy with particular emphasis on the role of lactulose. The pharmacology and mechanism of action of lactulose are considered in detail. The data from clinical trials are well set out and analysed and there is no doubt that the drug is highly efficacious and entirely safe—an unusual combination. The use of the lactulose enema (a neglected approach in the United Kingdom) is highlighted and there are interesting observations on the value of combining lactulose with neomycin, a situation in which only 30-50% of the patients seem to derive any benefit from the lactulose.

Although the book is perhaps too long and detailed for most busy general gastroenterologists, it is a must for the hepatologist and as a source book should be in every library.

I M MURRAY-LYON

**International Symposium on Hepatotoxicity** Edited by M Eliakim, J Eshchar, and H J Zimmerman. (Pp. 167. Illustrated. £12.35; \$19.00.) Academic Press: New York, London, 1979.

This book is a collection of papers presented at a symposium in 1973 and is now of little more than historical interest. It is surprising that there are no contributions dealing with the hepatotoxicity of paracetamol, anti-tuberculous drugs, or alcohol. There is nothing about vinyl chloride in the section on occupational hepatotoxicity.

There appears to have been little editing of individual contributions, many chapters do not contain a summary, and there is no index. A section on the value of serum enzyme measurements, by one of the editors, merely tells the reader that this was discussed during the symposium. A detailed account would have been particularly valuable for a new worker in the field. Some chapters, however, are excellent, including Erlinger on bile flow and Berthelot on bilirubin disposal. Conn has written a well-balanced, though somewhat philosophical, account of halothane hepatitis, but recent studies inevitably make the section on pathogenesis out of date.

The final section of the book deals with environmental and host factors. With the exception of the chapters on aflatoxins and senecio the section contains little data and would have benefited from ruthless editing.

S P WILKINSON

**Immunology of the Gastrointestinal Tract** Edited by P Asquith. (Pp. 348. Illustrated. £20.50.) Churchill-Livingstone: Edinburgh. Dr. Asquith has assembled a highly talented team which has produced a volume remarkable for its comprehensive reviews. The book begins with three chapters on the basic immunology of the gut. The second part concerns disorders of gastrointestinal immunity and includes valuable contributions on the mouth, food allergy, and infections. Chapters on the immunobiology of the alimentary tract of the pig and an extensive review of animal disease akin to coeliac disease and inflammatory bowel disease are useful adjuncts. I found the chapter on the stomach confusing, but, in general, the layout of each chapter is clear, although the text is so heavily referenced with authors' names that reading frequently becomes difficult. The text could have been simplified in several places as many tables are provided that summarise the information together with the appropriate references. The book will be of immense value as a source of reference for many disciplines concerned with the immunology of the gastrointestinal tract. It is a pity that high cost may largely confine this book to libraries.
