The Hand Before The Eye Hc 2000:

Plasticity in Sensory Systems Jennifer K. E. Steeves, Laurence R. Harris, 2013 Plasticity is a fundamental property of neural development and learning in living organisms. It also contributes to problems associated with aging and degenerative processes. Understanding neural plasticity has huge implications for those seeking to recover from brain injury or sensory deprivation and regular folk vying to improve their skills and ability. Centered on three themes, this book explores the latest research in plasticity in sensory systems with a focus primarily on visual and auditory systems. It covers a breadth of recent scientific study within the field, including research on healthy systems and diseased models of sensory processing. Topics include visual and visuomotor learning, models of how the brain codes visual information, sensory adaptations in vision and hearing as a result of partial or complete visual loss in childhood, plasticity in the adult visual system, and plasticity across the senses as well as new techniques in vision recovery, rehabilitation, and sensory substitution of other senses when one sense is lost. This unique edited volume, the fruit of an International Conference on Plastic Vision held at York University, Toronto, will provide students and scientists with an overview of the ongoing research related to sensory plasticity and perspectives on the direction of future work in the field. *Awards ... National Railroad Adjustment Board, **Space and Time in Perception and Action** Romi Nijhawan, Beena Khurana, 2010-03-25 What is the instantaneous position of a moving object from the point of view of the observer? How does a tennis player know when and where to place their racket in order to return a 120 mph serve? Does time stop sometimes and go faster at others? Space, time, and motion have played a fundamental role in extending the foundations of 19th and 20th century physics. Key breakthroughs resulted from scientists who focused not just on measurements based on rulers and clocks but also on the role of the observer. Research targeted on the observer's capabilities and limitations raises a promising new approach that is likely to forward our understanding of neuroscience and psychophysics. *Space and Time in Perception and Action* brings together theory and empirical findings from world-class experts and is written for advanced students and neuroscientists with a particular interest in the psychophysics of space, time, and motion. **Handbook of Visual Optics,**

Cohen, 2013-12-11 It has been 15 years since the original publication of *Neuropsychology of Attention*. At the time of its publication, attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists. Yet attention was typically viewed as a nuisance variable, a factor that needed to be accounted for when assessing brain function but of limited importance in its own right. There is a need for a new edition of this book within *Neuropsychology* to present an updated and integrated review of what is known about attention, the disorders that affect it, and approaches to its clinical assessment and treatment. Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain.
