Slow Viruses David H. Adams, Thomas Matthew Bell, 1976 **The Enigma of Slow Viruses** Pawel P. Liberski, 2012-12-06 Scrapie a naturally occurring neurodegenerative disease of sheep and sometimes goats is a prototypic disease for the whole group of the subacute spongiform virus encephalopathies Kuru was the first human disease of this type to be discovered in 1957 by Gajdusek and Zigas and its discovery opened the whole field in the human biomedical sciences by the very realization of the fact that viruses may induce disease months or even decades after infections and that these slow virus diseases are more compatible with classical degenerations of the nervous system than with inflammatory disorders of the brain More than a quarter of a century since discovery of Kuru and more than half a century following the first transmission of scrapie the very nature of the infectious virus remains unknown This comprehensive review covers all aspects of slow unconventional virus infections known today It includes numerous historical data biochemistry and molecular biology of the prion protein and its gene the role of genetics and mutations within PrP gene spreading and targeting of the virus biochemistry and neurochemistry of the alterations of different neurotransmitter system and neuropathology More than 1000 references are listed and critically analyzed the reader can find references to all experiments and laboratory findings which has ever been done in this field Furthermore the book offers different view on the basic problems as for example the nature of the scrapie agent **Inventing the AIDS Virus** Peter H. Computer Viruses: from theory to applications Eric Filiol, 2006-03-30 Viruses don t harm ignorance does Is ignorance a defense hermit I am convinced that computer viruses are not evil and that programmers have a right to create them to possess them and to experiment with them truth seekers and wise men have been persecuted by powerful idiots in every age Mark A Ludwig Everyone has the right to freedom of opinion and expression this right includes freedom to hold opinions without interference and to seek receive and impart information and ideas through any media and regardless of frontiers Article 19 of Universal Declaration of Human Rights The purpose of this book is to propose a teaching approach to understand what computer viruses really are and how they work To do this three aspects are covered ranging from theoretical fundamentals to practical applications and technical features fully detailed commented source 1 We will systematically use the plural form viruses instead of the literal one virii The latter is now an obsolete though grammatically recommended form VIII Preface codes of viruses as well as inherent applications are proposed So far the applications oriented aspects have hardly ever been addressed through the scarce existing literature devoted to computer viruses
