

How does the respiratory system work?

- Air is warmed, moistened and filtered as it travels through the mouth and nasal passages.
- It then passes through the trachea and one of the two bronchi into one of the lungs.
- After passing into the many bronchioles, it finally arrives into some of the millions of tiny sacs called alveoli.
- This is where gas exchange takes place - oxygen passes out of the air into the blood, and carbon dioxide passes out of the blood into the air in the alveoli.
