these theoretical works is a series of practical works whose goal is to make available the methodologies produced by strategic theory but without requiring the abstract theoretical work of the other strand This strand includes books on organisational political strategy and tactics for individuals and small groups as well as using strategy in political activism and on how to use strategy to analyse national and international policies established by governments The book contains a substantive set of worksheets useful in developing and carrying out a political strategy making it applicable in both the theoretical and practical realms

Cognitive Developmental Change Andreas Demetriou, Athanassios Raftopoulos, 2005-01-06 Cognitive Developmental Change makes a fascinating contribution to the fields of developmental cognitive and educational science by bringing together a uniquely diverse range of perspectives for analysing the dynamics of change Connecting traditional Piagetian information processing and psychometric approaches with newer frameworks for the analysis of developmental change it provides the reader with an account of the latest theory and research at the time of publication The contributors to the volume all internationally respected experts were asked when writing to consider three main aspects of cognitive change Its object what changes in the mind during development its nature how does change occur and its causes why does change occur Or what are the internal and external factors responsible for cognitive change As a result chapters cover key theories of cognitive change the factors that affect change including neurological emotional and socio cultural factors and methods for measuring and modelling change *Design Recommendations for Intelligent Tutoring Systems: Volume 7 - Self-Improving Systems* Benjamin Goldberg, 2019-10-23 This book on self improving systems is the seventh in a planned series of books that examine key topics e g learner modeling instructional strategies authoring domain modeling assessment impact on learning team tutoring self improving systems data visualization in intelligent tutoring system ITS design This book focuses on self improving systems The discussion chapters in this book examine topics through the lens of the Generalized Intelligent Framework for Tutoring GIFT GIFT is a modular service oriented architecture created to reduce the cost and skill required to author ITSs distribute ITSs manage instruction within ITSs and evaluate the effect of ITS technologies on learning performance retention transfer of skills and other instructional outcomes Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development

is associated with neural changes as well. In the end, this knowledge might also lead to a better understanding of the reasons for atypical numerical development, which often has grave consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities. Therefore, this Research Topic deals with all aspects of numerical development, findings from behavioural performance to underlying neural substrates, from cross-sectional to longitudinal evaluations from healthy to clinical populations. To this end, we included empirical contributions using different experimental methodologies but also theoretical contributions, review articles or opinion papers.

Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28

Complex problem solving (CPS) and related topics such as dynamic decision making (DDM) and complex dynamic control (CDC) represent multifaceted psychological phenomena. In a broad sense, CPS encompasses learning, decision making, and acting in complex and dynamic situations. Moreover, solutions to problems that people face in such situations are often generated in teams or groups. This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions. This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task, e.g., minimal complex system tests, which is a view taken by the psychometric community. The proposed approach taken here is that because CPS is multifaceted, multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other. Thus, this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities. The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS, DDM, and CDC. This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another, what learning conditions result in transferable knowledge and skills, and how these features can be trained.
