Strata Mechanics in Coal Mining M. Jeremic, 1985-01-01 **Strata Mechanics in Coal Mining** Wei Yin, Zhiwei Chen, 2018-04 Strata Mechanics I.W. Farmer, 2013-10-22 The papers in this volume provide a unified approach to the design of underground structures in stratified coal and mineral deposits They include examples of underground structure design in coal and evaporite mines and case histories of performance of underground structures **The Theory of Strata Mechanics** H. Gil, 2013-10-22 During the last thirty years the increasing need for extracting coal from new mining fields especially from unmined protective pillars and seams that are threatened with rock bursts and rock gas eruptions has accelerated the development of research in the fundamental mining discipline known as rock mass mechanics or geomechanics Generally rock mass mechanics is concerned with rock mass movements and with the phenomena accompanying them Extensive theoretical laboratory and in situ investigations have resulted in considerable achievements in the field of rock mass mechanics It is impossible to include all these achievements in a single monograph and therefore in the present book the author has attempted to construct a synthetic mathematical description of the rock mass movements and of the strain and stress state induced by mining in particular when extracting mineral deposits Ground Mechanics in Hard Rock Mining M.L. Jeremic, 2020-11-18 This book illustrates the advantages of the application of ground mechanic concepts to hard rock mining It examines the ground stability for various mine layouts using specific case histories The book deals with ground support reinforcement and stabilization of mining structures *Principles and Practices of Modern Coal Mining* R. D. Coal Mine Structures I.W. Farmer, 2012-12-06 Coal Mine Structures is based on a six year study carried out at the University of Newcastle upon Tyne between 1976 and 1982 and financed by the National Coal Board and the European Coal and Steel Community Projects 7220 ACj806 and 7220 ACj814 into the behaviour of under ground openings in British coal mines The original work has been expanded to include other relevant British and international data How ever it remains

deliberately a personal view based on a specific albeit broad research programme It does not pretend to be a complete description of the behaviour of shafts tunnels rooms pillars and long wall excavations Nor does it set out to provide a manual for design The specific aim is to show often through consideration of quite detailed laboratory and field data how the observed performance of some under ground structures during mining can be explained by the deformation characteristics of the rocks which surround them The work is based on observatiollB by many engineers working for the National Coal Board s Mining Research and Development Establishment and by research associates and postgraduate students at the University of Newcastle upon Tyne I am grateful to them all but I am particularly indebted to Dr A H Wilson and Mr M J Bell of the National Coal Board to Dr P F R Altounyan Dr P Garritty Dr P Holmes and Dr P D Shelton formerly of the University of Newcastle upon Tyne to Dr R N
