Critical Tales John D. Lyons, Mary B. McKinley, 2016-11-11 Appearing in print for the first time in 1558 the book that we now know as the Heptameron is the work of Marguerite Queen of Navarre Left incomplete but dearly modeled on Boccaccio's Decameron the Heptameron consists of a frame narrative and seventy two tales told by five men and five women characters in the shady meadow at Notre Dame de Sarrance As John D Lyons and Mary B McKinley contend in their introduction to this volume the tales of the Heptameron portray the conflicts ruptures and upheavals that agitated early modern French society They present a forum in which different elements of Renaissance and Reformation culture meet and at times collide Contradictory suppositions about men and women are easily discerned behind almost all of the stories and the discussions among the fictional storytellers represent attitudes both feminist and misogynist masculinist and misandrous Less oppositional are the religious conflicts among the storytellers some are less ardently religious while others are concerned with the corporeal rather than the spiritual The stories of the Heptameron are often cautionary tales about the corruption of the late medieval church about decadent priests and monks or about the unfortunate faithful whose belief in the efficacy of good works for salvation leads to disaster and death The conflicts of the Reformation loom over the Heptameron not just as the origin of its ideological tensions but also as a prominent symptom of the larger related disruptions that marked sixteenth century Europe Provocative and wide ranging appealing to specialists in numerous fields *Critical Tales* is the first collective volume of studies in English on the Heptameron The authors Robert D Cottrell Hope Glidden Marcel Tetel Donald Stone Tom Conley Michel Jeanneret Cathleen M Bauschatz Fran ois Cornilliat and Ullrich

Langer Mary B McKinley Philippe de Lajarte Andre Tournon Daniel Russell Fran ois Rigolot Paula Sommers and Edwin M Duval present different approaches to Marguerite de Navarre s tales dealing with such topics as confession rape the impact of printing on knowledge and narrative narrative theory and androgyny The contributors to Critical Tales like the storytellers of the Heptameron are not afraid to challenge the critical establishment and one another The book will be of interest to students and scholars of French and comparative literature and women s studies

Allele Mining for Genomic Designing of Cereal Crops Chittaranjan Kole, Sharat Kumar Pradhan, Vijay K. Tiwari, 2024-05-30. This book deliberates on the concept, strategies, tools, and techniques of allele mining in cereal crops and its application potential in genome elucidation and improvement, including studying allele evolution, discovery of superior alleles, discerning new haplotypes, assessment of intra and interspecific similarity, and studies of gene expression and gene prediction. Available gene pools in global germplasm collections, specifically consisting of wild allied species and local landraces for almost all major crops, have facilitated allele mining. Development of advanced genomic techniques, including PCR-based allele priming and Eco TILLING-based allele mining, are being widely used now for mining superior alleles. Allele's discovery has become more relevant now for employing molecular breeding to develop designed crop varieties matching consumer needs and with genome plasticity to adapt the climate change scenarios. All these concepts and strategies, along with precise success stories, are presented in the chapters dedicated to the major cereal crops. The first book on the novel strategy of allele mining in cereal crops for precise breeding. Presents genomic strategies for mining superior alleles underlying agronomic traits from genomic resources. Depicts case studies of PCR-based allele priming and Eco Tilling-based allele mining. Elaborates on gene discovery and gene prediction in major cereal crops. This book will be useful to the students and faculties in various plant science disciplines, including genetics, genomics, molecular breeding, agronomy, and bioinformatics, the scientists in seed industries, and the policymakers and funding agencies interested in crop improvement.
