Canter, 1993 A long awaited and critical review of a key topic this book shows how different empirical approaches to the study of social representations are viable and can be complementary Empirical examples of the analysis of particular social representations from museums to new technology are included The ten

chapters in the first half of the book present the key arguments concerning the relationship between the theory and methods. The second half looks at a wide variety of research topics. Of central concern to all the topics are the circumstances under which one can be certain of having described a social representation. The answer lies in the use of multivariate statistical analysis the use of which is clearly explained.

A look at development , Gender, Power and Knowledge for Development Lata Narayanaswamy, 2016-12-08 Knowledge for development is under theorised and under researched within development studies but as a set of policy objectives it is thriving within development practice. Donors and other agencies are striving to improve the flow of information within and between decision makers and so called poor and marginalized groups in order to promote economic and social development including the empowerment of women. Gender Power and Knowledge for Development questions the assumptions and practice of the knowledge for development industry. Using a qualitative multi site ethnographical study of a Northern based gender information service and its beneficiaries in India the book queries the utility of the knowledge paradigm itself and the underlying assumption that a knowledge deficit exists in the Global South. It questions the value of practices designed to address this presumed deficit that seek to increase information without addressing the specific problems of the knowledge systems being targeted for support. After reviewing the evidence the book recommends that international organisations governments and practitioners move away from the belief that information intermediaries can employ progressive correctives to tinker at the edges and thus resolve the shortcomings of on going attempts to use knowledge alone as a driver of development. Gender Power and Knowledge for Development will be of great interest to researchers students in development studies gender studies and communication studies as well as INGOs donor agencies and groups engaged in information for development i4D ICT for development ICT4D Tech4Dev knowledge mobilization and knowledge for development K4D.

Social Interaction and the Development of Knowledge Jeremy I.M. Carpendale, Ulrich Müller, 2014-04-04 Written by highly respected theorists in psychology and philosophy the chapters in this book explicate and address fundamental epistemological issues involved in the problem of the relationship between the individual and the collective. Different theoretical viewpoints are presented on this relationship as well as between the nature of rationality and morality relativism and universalism and enculturation and internalization. Many chapters also highlight similarities and differences between these alternative frameworks and Piaget's theory and thus correct the misperception that Piaget had nothing to say about the social dimension of development. Other chapters focus on the implications of these debates for the important topic areas of pedagogy moral development and the development of social understanding in infancy and childhood. Although Piaget's theory is presented and evaluated by some of the chapters in this collection the authors remain critical and do not shy away from revising or extending Piaget's theory whenever it is deemed necessary. Though the topic covered in this book is of fundamental importance in the social sciences it is rarely addressed in a sustained way as it is in this collection of chapters. The book benefits social scientists interested in fundamental epistemological issues.
