needed broad view of the field bringing together physiological research psychodynamic theory and sociological perspectives in a way that both celebrates their differences and explores their potential fusion The Psychology of Food and Eating provides more than a dry decontextualised physiological explanation of food and eating It moves on to enable students to see food in its wider context in terms of everyday life and real routines It provides an overview of social scientific approaches to the study of food biosocial socioanthropological structural feminist psychodynamic and an appreciation of the various ways that social psychological perspectives can be applied to real life contexts With its detailed and almost confessional account of the research process students will gain an insider's perspective on how observational and idiographic techniques are deployed in practice in everyday settings The book will prove of interest not only to students and researchers on health psychology applied psychology and critical psychology courses but also to all those looking for a really accessible introduction to contemporary alternatives to the more conventional research techniques used in this field *The Psychology of Food Marketing and Overeating* Frans Folkvord, 2019-07-31 Integrating recent research and existing knowledge on food marketing and its effects on the eating behaviour of children adolescents and adults this timely collection explores how food promotion techniques can be used to promote healthier foods Numerous factors influence what when and how we eat but one of the main drivers behind the unhealthy dietary intake of people is food marketing Bringing together important trends from different areas of study with state of the art insights from multiple disciplines the book examines the important factors and psychological processes that explain the effects of food marketing in a range of contexts including social media platforms The book also provides guidelines for future research by critically examining interventions and their effectiveness in reducing the impact of food marketing on dietary intake in order to help develop new research programs legislation and techniques about what can be done about unhealthy food marketing With research conducted by leading scholars from across the world this is essential reading for students and academics in psychology and related areas as well as professionals interested in food marketing and healthy eating **How We Eat** Leon Rappoport, 2010-11-10 Tracing culinary customs from the Stone Age to the stovetop range from the raw to the nuked this book elucidates the factors and myths shaping Americans eating habits The diversity of food habits and rituals is considered from a psychological perspective Explored are questions such as Why does the working class prefer sweet drinks over bitter Why do the affluent tend to roast their potatoes and What is so comforting about macaroni and cheese anyway The many contradictions of Americans relationships with food are identified food is both a primal source of sensual pleasure and a major cultural anxiety Americans adore celebrity chefs but no one cooks at home anymore the gourmet health food industry is soaring yet a longtime love affair with fast food endures The future of food is also covered including speculation about whether traditional meals will one day evolve into the mere popping of a nutrition capsule *A Guide to the Psychology of Eating* Leighann R. Chaffee, Stephanie P. da Silva, 2022-01-13 Why are spicy cuisines characteristic of hot climates Does our stomach or our brain tell us when it is time to eat And how do

we decide if bugs are food Employing a learner centered approach this introduction to the psychological mechanisms of consumption engages readers with questions and cross cultural examples to promote critical analysis and evidence based comprehension The discipline of psychology provides an important perspective to the study of eating given the remarkable complexity of our food environments including society and culture eating habits and relationships with food As everything psychological is simultaneously biological the role of evolutionary pressures and biopsychological forces are bases to explore complex processes within the book such as sensation and perception learning and cognition and human development The authors illuminate contemporary eating topics including the scope and consequences of overnutrition the aetiology of eating disorders societal focus on dieting and body image controversies in food policy and culture inspired cuisine Supplemental resources and exercises are provided in a pedagogically focused companion website
