Paradoxes in Social Work Practice Merlinda Weinberg, 2016-03-17 In the helping professions codes of ethics and decision making models have been the primary vehicles for determining what constitutes ethical practice These strategies are insufficient since they assume that shared meanings exist and that the contradictory universal principles of codes can be reconciled Also these tools do not emphasize the significance of context for ethical practice This book takes a new critical theoretical approach which involves exploring how social workers construct what is ethical in their work especially when they are positioned at the intersection of multiple paradoxes including that of two opposing responsibilities in society namely to care for others but also to prevent others from harm The book is built on narratives from actual front line workers and therefore is more applicable and grounded for practitioners and students offering many suggestions for sound practice It illustrates that an understanding of ethics differs from worker to worker and is heavily influenced by context workers values and what they take up as the primary discourses that frame their perceptions of the profession While recognizing the oppressive potential of social work the book is rooted in a perspective that ethical practice can contribute to a more socially just society
